## Tantalum Ultra Low ESR Capacitor

Low ESR, high capacitance and high ripple current are the key parameters for processor filtering. Multianode configuration within a standard E case package meets these requirements. Parameters such as ESR 15mΩ, capacitance 1500μF and ripple current above 4A rms makes TPM series ready to use with the latest processor families.

TPM D case capacitors in addition are using a "mirror" multianode construction that reduces self-inductance ESL from 2.4nH to 1.0nH and thus frequency range is extended to about 500 kHz.
