ICS8312
Low Skew, 1-to-12
LVCMS / LVTTL Fanout Buffer

GENERAL DESCRIPTION

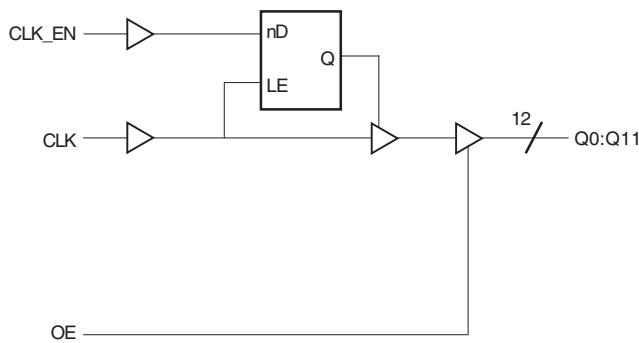

The ICS8312 is a low skew, 1-to-12 LVCMS / LVTTL Fanout Buffer and a member of the HiPerClockS™ family of High Performance Clock Solutions from ICS. The ICS8312 single ended clock input accepts LVCMS or LVTTL input levels. The low impedance LVCMS outputs are designed to drive 50Ω series or parallel terminated transmission lines. The effective fanout can be increased from 12 to 24 by utilizing the ability of the outputs to drive two series terminated lines.

The ICS8312 is characterized at full 3.3V, 2.5V, and 1.8V, mixed 3.3V/2.5V, 3.3V/1.8V and 2.5V/1.8V output operating supply modes. Guaranteed output and part-to-part skew characteristics along with the 1.8V output capabilities makes the ICS8312 ideal for high performance, single ended applications that also require a limited output voltage.
