### Notes:

1. Unless otherwise noted, Electrical and Switching Characteristics are guaranteed across these operating conditions.
2. LCLK and 54MOUT outputs only.
3. Guaranteed by design, not 100% tested.
4. Identical Crystal Load Capacitance as CY2212ZC-2. Use the same crystal and X<sub>IN</sub> / X<sub>OUT</sub> board layout as implemented with the original crystal-driven CY2212ZC-2.
5. Differential output crossing point voltages shown in *Figure 1*.
6. V<sub>COS</sub> = V<sub>OH</sub> - V<sub>OL</sub>.
7. r<sub>OUT</sub> = Δ V<sub>O</sub> / Δ I<sub>O</sub>. This is defined at the output pins, not at the measurement point of *Figure 9*.
