

## FEATURES

- Member of the Texas Instruments Widebus™ Family
- OEC™ Circuitry Improves Signal Integrity and Reduces Electromagnetic Interference
- D-Type Flip-Flops With Qualified Storage Enable
- Translates Between GTL/GTL+ Signal Levels and LVTTL Logic Levels
- Supports Mixed-Mode Signal Operation on All Ports (5-V Input/Output Voltages With 3.3-V  $V_{CC}$ )
- $I_{off}$  Supports Partial-Power-Down Mode Operation
- Bus Hold on Data Inputs Eliminates the Need for External Pullup/Pulldown Resistors on A Port
- Distributed  $V_{CC}$  and GND Pins Minimize High-Speed Switching Noise
- Latch-Up Performance Exceeds 100 mA Per JESD 78, Class II
- ESD Protection Exceeds JESD 22
  - 2000-V Human-Body Model (A114-A)
  - 200-V Machine Model (A115-A)
  - 1000-V Charged-Device Model (C101)

## DESCRIPTION/ORDERING INFORMATION

The SN74GTL16923 is an 18-bit registered bus transceiver that provides LVTTL-to-GTL/GTL+ and GTL/GTL+-to-LVTTL signal-level translation. This device is partitioned as two 9-bit transceivers with individual output-enable controls and contains D-type flip-flops for temporary storage of data flowing in either direction. This device provides an interface between cards operating at LVTTL logic levels and a backplane operating at GTL/GTL+ signal levels. Higher-speed operation is a direct result of the reduced output swing ( $<1$  V), reduced input threshold levels, and OEC™ circuitry.

The user has the flexibility of using this device at either GTL ( $V_{TT} = 1.2$  V and  $V_{REF} = 0.8$  V) or the preferred higher noise margin GTL+ ( $V_{TT} = 1.5$  V and  $V_{REF} = 1$  V) signal levels. GTL+ is the Texas Instruments derivative of the Gunning Transceiver Logic (GTL) JEDEC standard JESD 8-3. The B port normally operates at GTL or GTL+ signal levels, while the A-port and control inputs are compatible with LVTTL logic levels. All inputs can be driven from either 3.3-V or 5-V devices, which allows use in a mixed 3.3-V/5-V system environment.  $V_{REF}$  is the reference input voltage for the B port.

## DESCRIPTION/ORDERING INFORMATION (CONTINUED)

Data flow in each direction is controlled by the output-enable ( $\overline{OEAB}$  and  $\overline{OEBA}$ ) and clock (CLKAB and CLKBA) inputs. The clock-enable ( $\overline{CEAB}$  and  $\overline{CEBA}$ ) inputs enable or disable the clock for all 18 bits at a time. However,  $\overline{OEAB}$  and  $\overline{OEBA}$  are designed to control each 9-bit transceiver independently, which makes the device more versatile.

For A-to-B data flow, the device operates on the low-to-high transition of CLKAB if  $\overline{CEAB}$  is low. When  $\overline{OEAB}$  is low, the outputs are active. When  $\overline{OEAB}$  is high, the outputs are in the high-impedance state. Data flow for B to A is similar to that of A to B, but uses  $\overline{OEBA}$ , CLKBA, and  $\overline{CEBA}$ .

This device is fully specified for partial-power-down applications using  $I_{off}$ . The  $I_{off}$  circuitry disables the outputs, preventing damaging current backflow through the device when it is powered down.

Active bus-hold circuitry holds unused or undriven LVTTL inputs at a valid logic state. Use of pullup or pulldown resistors with the bus-hold circuitry is not recommended.

To ensure the high-impedance state during power up or power down,  $\overline{OE}$  should be tied to  $V_{CC}$  through a pullup resistor; the minimum value of the resistor is determined by the current-sinking capability of the driver.

## ORDERING INFORMATION

$T_A$	PACKAGE <sup>(1)</sup>		ORDERABLE PART NUMBER	TOP-SIDE MARKING
–40°C to 85°C	TSSOP – DGG	Tape and reel	SN74GTL16923DGGR	GTL16923

(1) Package drawings, standard packing quantities, thermal data, symbolization, and PCB design guidelines are available at [www.ti.com/sc/package](http://www.ti.com/sc/package).

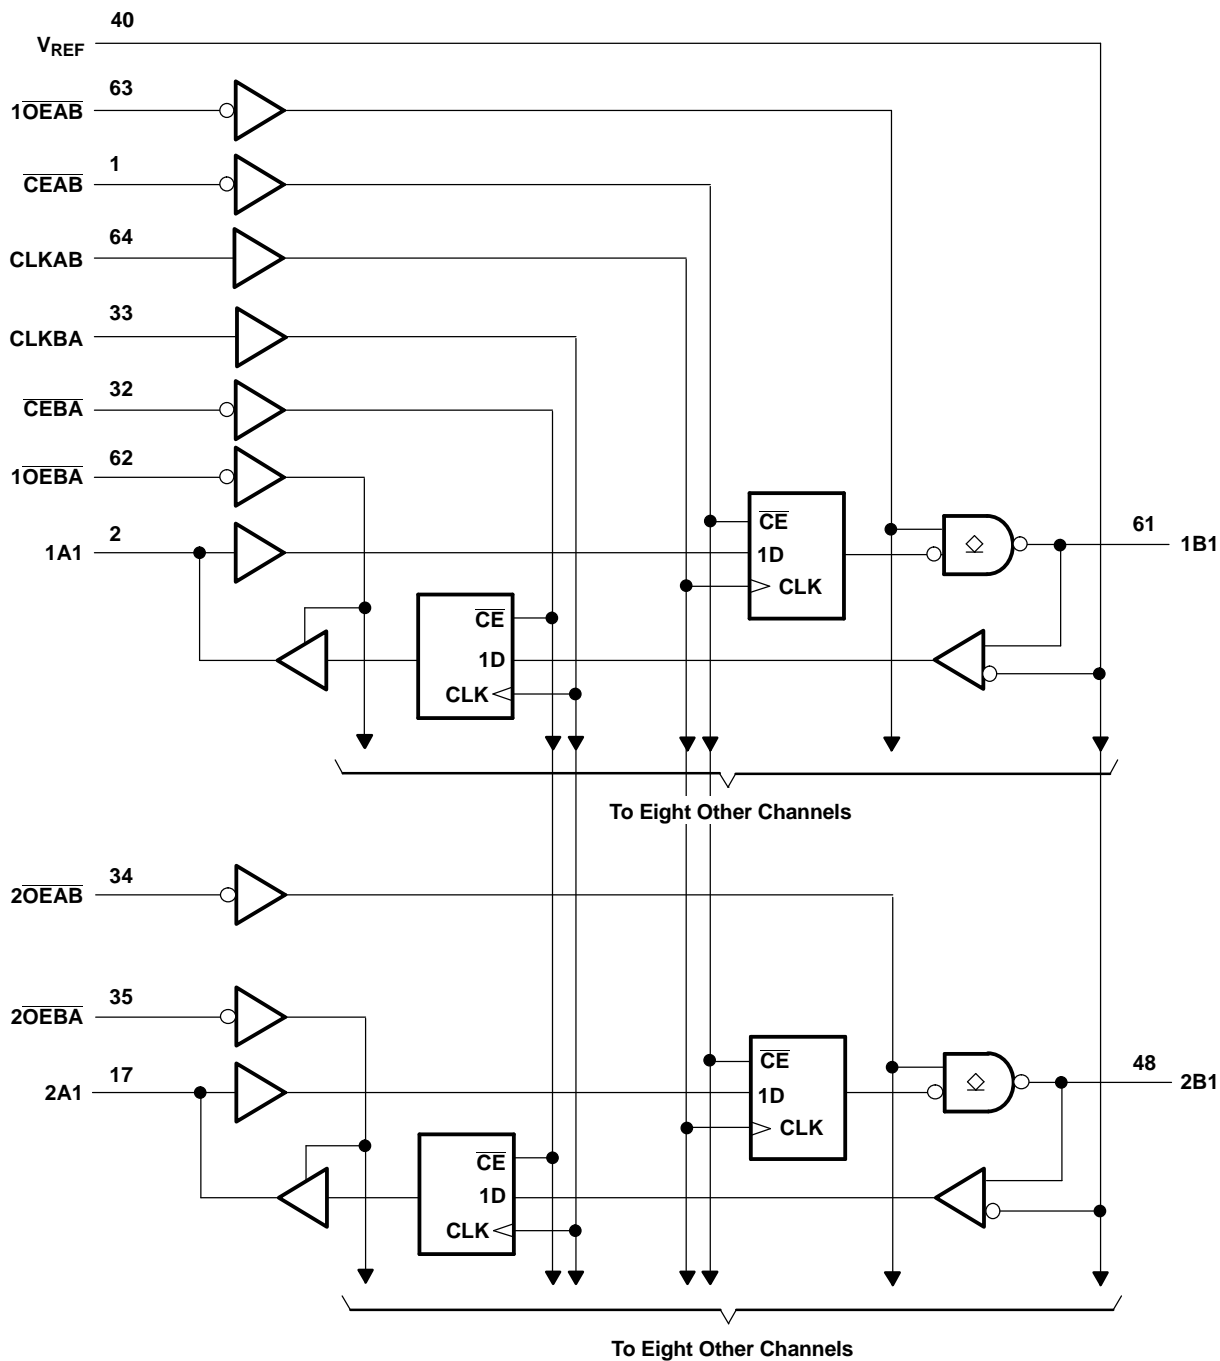

## FUNCTION TABLE<sup>(1)</sup>

INPUTS				OUTPUT B	MODE
$\overline{CEAB}$	$\overline{OEAB}$	CLKAB	A		
X	H	X	X	Z	Isolation
H	L	X	X	$B_0^{(2)}$	Latched storage of A data
X	L	H or L	X	$B_0^{(2)}$	
L	L	↑	L	L	Clocked storage of A data
L	L	↑	H	H	

(1) A-to-B data flow is shown. B-to-A data flow is similar, but uses  $\overline{OEBA}$ , CLKBA, and  $\overline{CEBA}$ .

(2) Output level before the indicated steady-state input conditions were established

## 18-BIT LVTTTL-TO-GTL/GTL+ BUS TRANSCEIVER

SCBS674G–AUGUST 1996–REVISED APRIL 2005

### Absolute Maximum Ratings<sup>(1)</sup>

over operating free-air temperature range (unless otherwise noted)

		MIN	MAX	UNIT
$V_{CC}$	Supply voltage range	–0.5	4.6	V
$V_I$	Input voltage range <sup>(2)</sup>	–0.5	7	V
$V_O$	Voltage range applied to any output in the high or power-off state <sup>(2)</sup>	–0.5	7	V
$I_O$	Current into any output in the low state	A port		48
		B port		100
$I_O$	Current into any A-port output in the high state <sup>(3)</sup>		48	mA
	Continuous current through each $V_{CC}$ or GND		±100	mA
$I_{IK}$	Input clamp current	$V_I < 0$	–50	mA
$I_{OK}$	Output clamp current	$V_O < 0$	–50	mA
$\theta_{JA}$	Package thermal impedance <sup>(4)</sup>		55	°C/W
$T_{stg}$	Storage temperature range	–65	150	°C

- (1) Stresses beyond those listed under "absolute maximum ratings" may cause permanent damage to the device. These are stress ratings only, and functional operation of the device at these or any other conditions beyond those indicated under "recommended operating conditions" is not implied. Exposure to absolute-maximum-rated conditions for extended periods may affect device reliability.
- (2) The input and output negative-voltage ratings may be exceeded if the input and output clamp-current ratings are observed.
- (3) This current flows only when the output is in the high state and  $V_O > V_{CC}$ .
- (4) The package thermal impedance is calculated in accordance with JESD 51-7.

### Recommended Operating Conditions<sup>(1)(2)(3)(4)</sup>

		MIN	NOM	MAX	UNIT
$V_{CC}$	Supply voltage	3.15	3.3	3.45	V
$V_{TT}$	Termination voltage	GTL	1.14	1.2	1.26
		GTL+	1.35	1.5	1.65
$V_{REF}$	Reference voltage	GTL	0.74	0.8	0.87
		GTL+	0.87	1	1.1
$V_I$	Input voltage	B port	0	$V_{TT}$	V
		Except B port	0	5.5	
$V_{IH}$	High-level input voltage	B port	$V_{REF} + 50$ mV		V
		Except B port	2		
$V_{IL}$	Low-level input voltage	B port	$V_{REF} - 50$ mV		V
		Except B port	0.8		
$I_{IK}$	Input clamp current			–18	mA
$I_{OH}$	High-level output current	A port		–24	mA
$I_{OL}$	Low-level output current	A port		24	mA
		B port		50	
$T_A$	Operating free-air temperature	–40		85	°C

- (1) All unused control inputs of the device must be held at  $V_{CC}$  or GND to ensure proper device operation. Refer to the TI application report *Implications of Slow or Floating CMOS Inputs*, literature number SCBA004.
- (2) Normal connection sequence is GND first,  $V_{CC} = 3.3$  V, I/O, control inputs,  $V_{TT}$ ,  $V_{REF}$  (any order) last.
- (3)  $V_{TT}$  and  $R_{TT}$  can be adjusted to accommodate backplane impedances if the dc recommended  $I_{OL}$  ratings are not exceeded.
- (4)  $V_{REF}$  can be adjusted to optimize noise margins, but normally is two-thirds  $V_{TT}$ .

## Electrical Characteristics

over recommended operating free-air temperature range for GTL/GTL+ (unless otherwise noted)

PARAMETER		TEST CONDITIONS		MIN	TYP <sup>(1)</sup>	MAX	UNIT
$V_{IK}$		$V_{CC} = 3.15\text{ V}$ , $I_I = -18\text{ mA}$				-1.2	V

	A-port and control inputs	$V_{CC} = 3.45\text{ V}$	$V_I = V_{CC}\text{ or GND}$			$\pm 5$	
			$V_I = 5.5\text{ V or GND}$			$\pm 20$	
$I_{off}$		$V_{CC} = 0$ , $V_I$ or $V_O = 0\text{ to } 5.5\text{ V}$				$\pm 100$	$\mu\text{A}$
$I_{I(hold)}$	A port	$V_{CC} = 3.15\text{ V}$	$V_I = 0.8\text{ V}$	75			$\mu\text{A}$
			$V_I = 2\text{ V}$	-75			
		$V_{CC} = 3.45\text{ V}^{(2)}$ ,	$V_I = 0.8\text{ V to } 2\text{ V}$			$\pm 500$	
$I_{OZ}^{(3)}$	A port	$V_{CC} = 3.45\text{ V}$ ,	$V_O = V_{CC}\text{ or GND}$			$\pm 10$	$\mu\text{A}$
$I_{OZH}$	B port	$V_{CC} = 3.45\text{ V}$ ,	$V_O = 1.5\text{ V}$			10	$\mu\text{A}$
$I_{CC}$	A or B port	$V_{CC} = 3.45\text{ V}$ , $I_O = 0$ , $V_I = V_{CC}\text{ or GND}$	Outputs high			60	mA
			Outputs low			60	
			Outputs disabled			60	
$\Delta I_{CC}^{(4)}$		$V_{CC} = 3.45\text{ V}$ , A-port or control inputs at $V_{CC}\text{ or GND}$ , One input at $V_{CC} - 0.6\text{ V}$				500	$\mu\text{A}$
$C_i$	Control inputs	$V_I = 3.15\text{ V or } 0$		2.5		3	pF
$C_{io}$	A port	$V_O = 3.15\text{ V or } 0$		6		8.5	pF
	B port	$V_O = 3.15\text{ V or } 0$		7		9.5	

(1) All typical values are at  $V_{CC} = 3.3\text{ V}$ ,  $T_A = 25^\circ\text{C}$ .

(2) This is the bus-hold maximum dynamic current. It is the minimum overdrive current required to switch the input from one state to another.

(3) For I/O ports, the parameter  $I_{OZ}$  includes the input leakage current.

(4) This is the increase in supply current for each input that is at the specified TTL voltage level, rather than  $V_{CC}$  or GND.

## PACKAGING INFORMATION

Orderable Device	Status (1)	Package Type	Package Drawing	Pins	Package Qty	Eco Plan (2)	Lead/Ball Finish	MSL Peak Temp (3)	Op Temp (°C)	Device Marking (4/5)	Samples
74GTL16923DGGRE4	ACTIVE	TSSOP	DGG	64		TBD	Call TI	Call TI	-40 to 85	GTL16923	<a href="#">Samples</a>
74GTL16923DGGRG4	ACTIVE	TSSOP	DGG	64		TBD	Call TI	Call TI	-40 to 85	GTL16923	<a href="#">Samples</a>

(1) The marketing status values are defined as follows:

**ACTIVE:** Product device recommended for new designs.

**LIFEBUY:** TI has announced that the device will be discontinued, and a lifetime-buy period is in effect.

**NRND:** Not recommended for new designs. Device is in production to support existing customers, but TI does not recommend using this part in a new design.

**PREVIEW:** Device has been announced but is not in production. Samples may or may not be available.

**OBSOLETE:** TI has discontinued the production of the device.

(2) Eco Plan - The planned eco-friendly classification: Pb-Free (RoHS), Pb-Free (RoHS Exempt), or Green (RoHS & no Sb/Br) - please check <http://www.ti.com/productcontent> for the latest availability information and additional product content details.

**TBD:** The Pb-Free/Green conversion plan has not been defined.

**Pb-Free (RoHS):** TI's terms "Lead-Free" or "Pb-Free" mean semiconductor products that are compatible with the current RoHS requirements for all 6 substances, including the requirement that lead not exceed 0.1% by weight in homogeneous materials. Where designed to be soldered at high temperatures, TI Pb-Free products are suitable for use in specified lead-free processes.

**Pb-Free (RoHS Exempt):** This component has a RoHS exemption for either 1) lead-based flip-chip solder bumps used between the die and package, or 2) lead-based die adhesive used between the die and leadframe. The component is otherwise considered Pb-Free (RoHS compatible) as defined above.

**Green (RoHS & no Sb/Br):** TI defines "Green" to mean Pb-Free (RoHS compatible), and free of Bromine (Br) and Antimony (Sb) based flame retardants (Br or Sb do not exceed 0.1% by weight in homogeneous material)

(3) MSL, Peak Temp. -- The Moisture Sensitivity Level rating according to the JEDEC industry standard classifications, and peak solder temperature.

(4) There may be additional marking, which relates to the logo, the lot trace code information, or the environmental category on the device.

(5) Multiple Device Markings will be inside parentheses. Only one Device Marking contained in parentheses and separated by a "~" will appear on a device. If a line is indented then it is a continuation of the previous line and the two combined represent the entire Device Marking for that device.

**Important Information and Disclaimer:** The information provided on this page represents TI's knowledge and belief as of the date that it is provided. TI bases its knowledge and belief on information provided by third parties, and makes no representation or warranty as to the accuracy of such information. Efforts are underway to better integrate information from third parties. TI has taken and continues to take reasonable steps to provide representative and accurate information but may not have conducted destructive testing or chemical analysis on incoming materials and chemicals. TI and TI suppliers consider certain information to be proprietary, and thus CAS numbers and other limited information may not be available for release.

In no event shall TI's liability arising out of such information exceed the total purchase price of the TI part(s) at issue in this document sold by TI to Customer on an annual basis.

## IMPORTANT NOTICE

Texas Instruments Incorporated and its subsidiaries (TI) reserve the right to make corrections, enhancements, improvements and other changes to its semiconductor products and services per JESD46, latest issue, and to discontinue any product or service per JESD48, latest issue. Buyers should obtain the latest relevant information before placing orders and should verify that such information is current and complete. All semiconductor products (also referred to herein as "components") are sold subject to TI's terms and conditions of sale supplied at the time of order acknowledgment.

TI warrants performance of its components to the specifications applicable at the time of sale, in accordance with the warranty in TI's terms and conditions of sale of semiconductor products. Testing and other quality control techniques are used to the extent TI deems necessary to support this warranty. Except where mandated by applicable law, testing of all parameters of each component is not necessarily performed.

TI assumes no liability for applications assistance or the design of Buyers' products. Buyers are responsible for their products and applications using TI components. To minimize the risks associated with Buyers' products and applications, Buyers should provide adequate design and operating safeguards.

TI does not warrant or represent that any license, either express or implied, is granted under any patent right, copyright, mask work right, or other intellectual property right relating to any combination, machine, or process in which TI components or services are used. Information published by TI regarding third-party products or services does not constitute a license to use such products or services or a warranty or endorsement thereof. Use of such information may require a license from a third party under the patents or other intellectual property of the third party, or a license from TI under the patents or other intellectual property of TI.

Reproduction of significant portions of TI information in TI data books or data sheets is permissible only if reproduction is without alteration and is accompanied by all associated warranties, conditions, limitations, and notices. TI is not responsible or liable for such altered documentation. Information of third parties may be subject to additional restrictions.

Resale of TI components or services with statements different from or beyond the parameters stated by TI for that component or service voids all express and any implied warranties for the associated TI component or service and is an unfair and deceptive business practice. TI is not responsible or liable for any such statements.

Buyer acknowledges and agrees that it is solely responsible for compliance with all legal, regulatory and safety-related requirements concerning its products, and any use of TI components in its applications, notwithstanding any applications-related information or support that may be provided by TI. Buyer represents and agrees that it has all the necessary expertise to create and implement safeguards which anticipate dangerous consequences of failures, monitor failures and their consequences, lessen the likelihood of failures that might cause harm and take appropriate remedial actions. Buyer will fully indemnify TI and its representatives against any damages arising out of the use of any TI components in safety-critical applications.

In some cases, TI components may be promoted specifically to facilitate safety-related applications. With such components, TI's goal is to help enable customers to design and create their own end-product solutions that meet applicable functional safety standards and requirements. Nonetheless, such components are subject to these terms.

No TI components are authorized for use in FDA Class III (or similar life-critical medical equipment) unless authorized officers of the parties have executed a special agreement specifically governing such use.

Only those TI components which TI has specifically designated as military grade or "enhanced plastic" are designed and intended for use in military/aerospace applications or environments. Buyer acknowledges and agrees that any military or aerospace use of TI components which have **not** been so designated is solely at the Buyer's risk, and that Buyer is solely responsible for compliance with all legal and regulatory requirements in connection with such use.

TI has specifically designated certain components as meeting ISO/TS16949 requirements, mainly for automotive use. In any case of use of non-designated products, TI will not be responsible for any failure to meet ISO/TS16949.
