DISCLAIMER

ALL PRODUCT, PRODUCT SPECIFICATIONS AND DATA ARE SUBJECT TO CHANGE WITHOUT NOTICE TO IMPROVE RELIABILITY, FUNCTION OR DESIGN OR OTHERWISE.

Vishay Intertechnology, Inc., its affiliates, agents, and employees, and all persons acting on its or their behalf (collectively, "Vishay"), disclaim any and all liability for any errors, inaccuracies or incompleteness contained in any datasheet or in any other disclosure relating to any product.

Vishay makes no warranty, representation or guarantee regarding the suitability of the products for any particular purpose or the continuing production of any product. To the maximum extent permitted by applicable law, Vishay disclaims (i) any and all liability arising out of the application or use of any product, (ii) any and all liability, including without limitation special, consequential or incidental damages, and (iii) any and all implied warranties, including warranties of fitness for particular purpose, non-infringement and merchantability.

Statements regarding the suitability of products for certain types of applications are based on Vishay's knowledge of typical requirements that are often placed on Vishay products in generic applications. Such statements are not binding statements about the suitability of products for a particular application. It is the customer's responsibility to validate that a particular product with the properties described in the product specification is suitable for use in a particular application. Parameters provided in datasheets and/or specifications may vary in different applications and performance may vary over time. All operating parameters, including typical parameters, must be validated for each customer application by the customer's technical experts. Product specifications do not expand or otherwise modify Vishay's terms and conditions of purchase, including but not limited to the warranty expressed therein.

Except as expressly indicated in writing, Vishay products are not designed for use in medical, life-saving, or life-sustaining applications or for any other application in which the failure of the Vishay product could result in personal injury or death. Customers using or selling Vishay products not expressly indicated for use in such applications do so at their own risk and agree to fully indemnify and hold Vishay and its distributors harmless from and against any and all claims, liabilities, expenses and damages arising or resulting in connection with such use or sale, including attorneys fees, even if such claim alleges that Vishay or its distributor was negligent regarding the design or manufacture of the part. Please contact authorized Vishay personnel to obtain written terms and conditions regarding products designed for such applications.

No license, express or implied, by estoppel or otherwise, to any intellectual property rights is granted by this document or by any conduct of Vishay. Product names and markings noted herein may be trademarks of their respective owners.

Wet Electrolytic Tantalum Capacitors

Tantalum electrolytic capacitors are the preferred choice in applications where volumetric efficiency, stable electrical parameters, high reliability and long service life are the primary considerations. The stability and resistance to elevated temperatures of the tantalum/tantalum oxide system make wet tantalum capacitors an appropriate choice for today's technology. Vishay is a pioneer and leader in this field, producing a large variety of tantalum capacitor types for industrial, military and aerospace electronic applications. Tantalum is not found in its pure state. Rather, it is commonly found in a number of oxide minerals, often in combination with Columbium ore. This combination is known as tantalite when its contents are more than one-half tantalum. Important sources of tantalite include Australia, Brazil, Canada, China and several African countries. Synthetic tantalite concentrates produced from tin slags in Thailand, Malaysia and Brazil are also a significant raw material for tantalum production.

Electronic applications and particularly capacitors consume the largest share of world tantalum production. Other important applications for tantalum include cutting tools (tantalum carbide), high temperature super alloys, chemical processing equipment, medical implants and military ordnance.

Vishay is a major user of tantalum materials in the form of powder and wire for capacitor elements and rod and sheet for high temperature vacuum processing.

THE BASICS OF TANTALUM CAPACITORS TECHNOLOGY

Most metals form crystalline oxides which are non-protecting, such as rust on iron or black oxide on copper. A few metals form dense, stable, tightly adhering, electrically insulating oxides. These are the so-called valve metals and include titanium, zirconium, niobium, tantalum, hafnium and aluminum. Only a few of these permit the accurate control of oxide thickness by electrochemical means. Of these, the most valuable for the electronics industry are aluminum and tantalum.

Wet tantalum capacitors are basic to all kinds of electrical equipment from satellites, aerospace, airborne, military ground support, oil exploration and power supplies. Their function is to store an electrical charge for later use.

Capacitors consist of two conducting surfaces, usually metal plates, whose function is to conduct electricity. An insulating material or dielectric separates them. The dielectric used in all tantalum electrolytic capacitors is tantalum pentoxide.

Tantalum pentoxide compound possesses high dielectric strength and a high dielectric constant. As capacitors are being manufactured, a film of tantalum pentoxide is applied to their electrodes by means of an electronic process. The film is applied in various thicknesses and at various voltages and although transparent to begin with, it takes on different colors as light refracts through it. This coloring occurs on the tantalum electrodes of all types of tantalum capacitors. Rating for rating, tantalum capacitors tend to have as much

as three times better capacitance/volume efficiency than aluminum electrolytic capacitors. An approximation of the capacitance/volume efficiency of other types of capacitors may be inferred from the following table, which shows the dielectric constant ranges of the various materials used in each type. Note that tantalum pentoxide has a dielectric constant of 26, some three times greater than that of aluminum oxide. This, in addition to the fact that extremely thin films can be deposited during the electrolytic process mentioned earlier, makes the tantalum capacitor extremely efficient with respect to the number of microfarads available per unit volume. The surface area of the two conducting plates determines the capacitance of any capacitor, the distance between the plates and the dielectric constant of the insulating material between the plates.

COMPARISON OF CAPACITOR DIELECTRIC CONSTANTS	
DIELECTRIC	K DIELECTRIC CONSTANT
Air or Vacuum	1.0
Paper	2.0 - 6.0
Plastic	2.1 - 6.0
Mineral Oil	2.2 - 2.3
Silicone Oil	2.7 - 2.8
Quartz	3.8 - 4.4
Glass	4.8 - 8.0
Porcelain	5.1 - 5.9
Mica	5.4 - 8.7
Aluminum Oxide	8.4
Tantalum Pentoxide	26
Ceramic	12 - 400.000

In the tantalum electrolytic capacitor, the distance between the plates is very small since it is only the thickness of the tantalum pentoxide film. As the dielectric constant of the tantalum pentoxide is high, the capacitance of a tantalum capacitor is high if the area of the plates is large:

$$C = \frac{\epsilon A}{t}$$

where

C = capacitance

ϵ = dielectric constant

A = surface area of the dielectric

t = thickness of the dielectric

The liquid electrolyte in wet slug capacitor, along with the case, forms the cathode (negative) plate. The anode lead wire consists of two pieces. A tantalum lead embedded in the pellet, which is in turn connected to a termination or leadwire. The cross section drawings clearly show the construction details of the various wet tantalum capacitors.

Introduction

Vishay

Wet Electrolytic Tantalum Capacitors

109D COMMERCIAL STYLE

SILVER CASE ELASTOMER SEAL

Voltage Range:

6 WVDC to 125 WVDC

Capacitance Range:

1.7 μ F to 2200 μ F

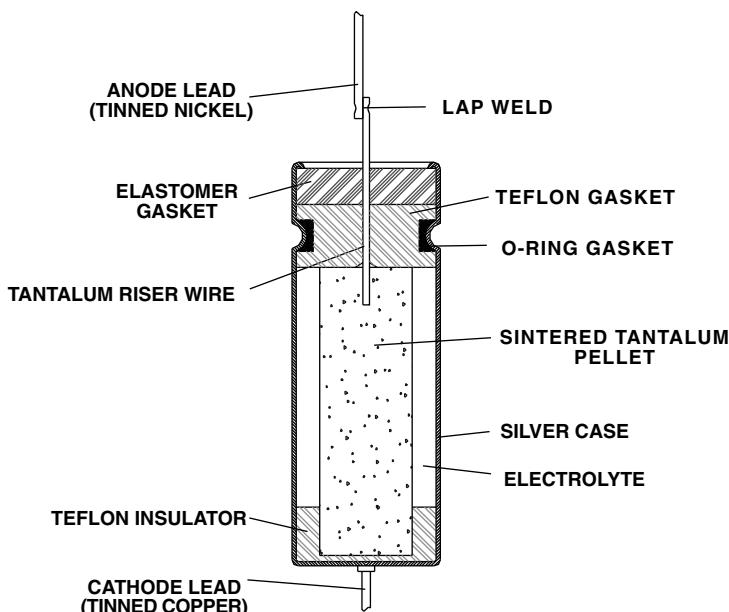

Size Range:

0.188" [4.78 mm] diameter x 0.453" [11.51 mm] long to

0.375" [9.52 mm] diameter x 1.062" [26.97 mm] long

Primary Applications:

Industrial, automotive and telecommunication applications where a superior quality, reliable design is desired

135D AND MIL STYLE CLR79/81/90/91

ALL TANTALUM HERMETIC SEAL (MILITARY SPECIFICATION MIL-PRF-39006)

Voltage Range:

6 WVDC to 125 WVDC

Capacitance Range:

1.7 μ F to 2200 μ F

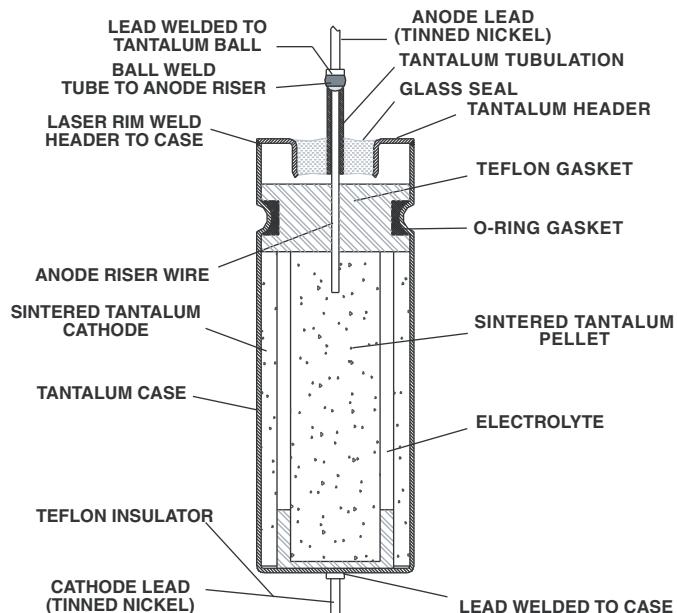

Size Range:

0.188" [4.78 mm] diameter x 0.453" [11.51 mm] long to

0.375" [9.52 mm] diameter x 1.062" [26.97 mm] long

Primary Applications:

Industrial and military applications requiring energy storage, voltage hold-up and filtering. Designed for aerospace, oil exploration and power supplies. The capacitors have a high resistance to damage from shock and vibration.

138D AND MIL STYLES CLR65/69

SILVER CASE HERMETIC SEAL
(MILITARY SPECIFICATION MIL-PRF-39006)

Voltage Range:

6 WVDC to 125 WVDC

Capacitance Range:

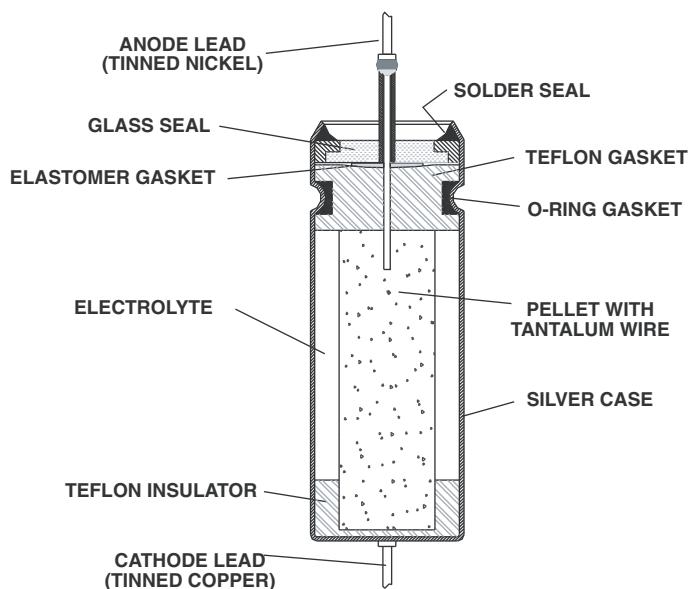

1.7 μ F to 2200 μ F

Size Range:

0.188" [4.78 mm] diameter x 0.453" [11.51 mm] long to
0.375" [9.52 mm] diameter x 1.062" [26.97 mm] long

Primary Applications:

Industrial and military equipment where reliability and premium performance with respect to low DC leakage current, high inrush current capability and high volumetric efficiency are vital.

SUPERTAN® AND MIL STYLE DSCC 93026

ALL TANTALUM HERMETIC SEAL
(MILITARY DRAWING DSCC 93026)

Voltage Range:

6 WVDC to 125 WVDC

Capacitance Range:

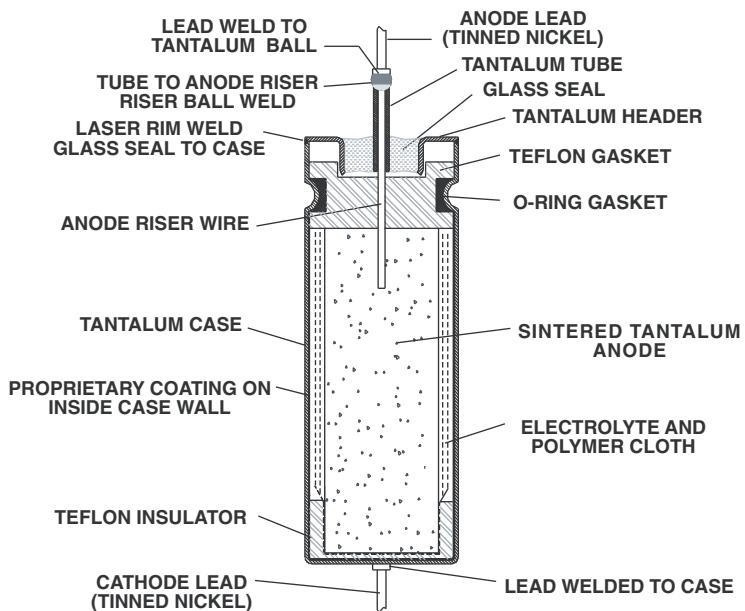

10 μ F to 4700 μ F

Size Range:

0.188" [4.78 mm] diameter x 0.453" [11.51 mm] long to
0.375" [9.52 mm] diameter x 1.062" [26.97 mm] long

Primary Applications:

Industrial and military applications where high capacitance, size and weight are the primary considerations. SuperTan® is preferred capacitor style for the voltage hold-up timing and filtering circuit design

Introduction

Vishay

Wet Electrolytic Tantalum Capacitors

WET ELECTROLYTE TANTALUM CAPACITORS

Wet electrolyte, sintered anode tantalum capacitors often called wet slug tantalum capacitors, use a pellet of sintered tantalum power to which a lead has been attached.

Tantalum powder of suitable fineness, sometimes mixed with binding agents, is mechanically pressed into pellets.

The lead is embedded during pressing of the pellet. The next step is a sintering operation in which binders, impurities and contaminants are vaporized and the tantalum particles are sintered into a porous mass with a very large surface area.

A film of tantalum pentoxide is electrochemically formed on the surface areas of the fused tantalum particles. Provided sufficient time and current is available, the oxide will grow to a thickness determined by the applied voltage.

The pellet is then inserted into a tantalum or silver can, which contains an electrolyte solution. A suitable end seal arrangement prevents the loss of the electrolyte.

Wet slug tantalum capacitors are manufactured in a voltage range up to 125 WVDC.

The Vishay SuperTan® represents a major breakthrough in tantalum electrolyte capacitor design. The SuperTan design dramatically increased the available capacitance in each of the four standard cased sizes. It provides two to three times more capacitance per unit volume while substantially increasing ripple current capability as well as reduced ESR.

In airborne, aerospace, satellite and smart munitions applications where size and weight are the primary considerations, SuperTan is the preferred capacitor style for the energy storage, voltage hold-up, timing and filtering circuit design. With these circuit functions in mind, along with long-term shelf life, operation life and reliability, SuperTan provides the circuit designer a solution to many of the problems that previously were resolved with marginally reliable and ineffective size options.

SuperTan is available to the military sector on a DSCL approved drawing (93026) as well to the commercial sector as a standard device.

TANTALUM CAPACITORS FOR ALL DESIGN CONSIDERATIONS

In choosing between the solid or wet style of tantalum capacitor, the circuit designer customarily uses wet tantalum capacitors, where the lowest DC leakage is required. The conventional silver can design will not tolerate any reverse voltages. In military or aerospace applications, tantalum cases units are used in place of silver cases where the utmost reliability is desired. The tantalum cased styles, CLR79 and CLR81, will withstand reverse voltages up to 3 V. They will operate under higher ripple currents and can be used at temperatures up to + 392 °F (+ 200 °C).

Vishay has the broadest line of tantalum capacitors and has continued its position of leadership in this field. Data sheets covering the various types and styles of Vishay capacitors for industry and for military applications are available on the Vishay web site: www.vishay.com

WET TANTALUM CAPACITORS				
PICTORIAL	MODEL	CASE CODES	DESCRIPTION	PAGE
	STA	1, 2, 3, 4	Wet tantalum capacitors-sintered anode-tantalum case capacitor. Axial lead. Hermetically sealed. Operation temperature range of - 55 °C to + 85 °C in the voltage range 6 V to 15 V. This range is exceptionally well suited for low voltage filtering and energy storage applications.	91
	STE	2, 4	Wet tantalum capacitor-sintered anode tantalum case capacitor. Axial lead. Hermetically sealed. A patented unique cathode design enables an 85 % to 250 % increase in capacitance as well as improved ESR and ripple current capabilities when compared to conventional wet tantalum devices.	93
	134D	C, F, T, K	Wet tantalum capacitor-sintered anode tantalum case capacitor. Axial lead. Hermetically sealed. A patented unique cathode design enables an 85 % to 250 % increase in capacitance as well as improved ESR and ripple current capabilities when compared to conventional wet tantalum devices. HI TMP® (+ 200 °C).	96
	T16	D	For avionics and aerospace applications, the new T16 series of wet tantalum capacitors with glass-to-tantalum hermetic seals provides all the advantages of Vishay's SuperTan series devices, while offering enhanced performance with a reverse voltage of 1.5 V at + 85 °C and a high-reliability design with improved vibration (sine: 20 g; random: 27.7 g), thermal shock (300 cycles), and mechanical shock capabilities.	99
	XT	K, M, L, H, V	Wet tantalum design with hermetic seal. Will handle extreme environmental conditions and high temperature (- 55 °C to + 175 °C). Suitable for aircraft, space and well logging applications. Can be supplied in various terminal configurations.	103
	HE3	A, B, C	ULTRA high capacitance, HIGH ENERGY wet tantalum sintered-anode tantalum case capacitor. Operation to + 125 °C.	114
	200D 202D	A1 - A5 B1 - B7 D3	Wet tantalum capacitor-sintered anode Tantalex® capacitor for operation to + 175 °C: Available in three standard case styles and 13 case codes. Operating temperature is - 55 °C to + 125 °C. 200D units are constructed with the negative terminal connected to the case. Used in filtering, coupling, bypass and time-delay circuits in computers, missiles, airborne equipment, radar and fire control systems.	120
	285D	A, B, C, D, E, F, G, H	Tantalum foil replacement capacitor. Wet tantalum sintered-anode tantalum case capacitor. Operation to + 125 °C. Both polar and non-polar designs available.	132
	CA2, CE2, CH2, CS2	B, C	Wet tantalum capacitor, tantalum anode-cathode, unique button style, suitable for avionics and oil exploration markets.	147, 152, 157, 162

See individual datasheets for complete details

WET TANTALUM CAPACITORS				
PICTORIAL	MODEL	CASE CODES	DESCRIPTION	PAGE
	M34, M35	C	Wet tantalum capacitor, tantalum anode-cathode, surface mount package, suitable for military and avionics applications.	166, 170
	Custom Design Arrays	contact: wettants@vishay.com	Vishay offers a complete design service to provide the best technical and commercial solution. This service includes assistance preparing specifications and making samples, special testing, evaluating test results and making any necessary changes to achieve the ultimate in design.	203

Wet Tantalum Capacitors Sintered Anode TANTALEX® Capacitors for Operation to 125 °C, Elastomer Sealed

FEATURES

- Terminations: standard tin/lead (SnPb), 100 % tin (RoHS compliant) available
- Vishay Sprague model 109D tubular elastomer-sealed, sintered anode TANTALEX® capacitors fill the basic requirements for applications where a superior quality, reliable design for industrial, automotive and telecommunications application is desired.
- Model 109D capacitors are the commercial equivalents of Transistor style WC, UWC, Mallory-NACC style TLS, TLH and the Military Style CL64 and CL65, designed to meet the performance requirements of Military Specification MIL-DTL-3965.
- Compliant to RoHS Directive 2002/95/EC

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 85 °C
(to + 125 °C with voltage derating).

Capacitance Tolerance: At 120 Hz, + 25 °C. ± 20 % standard. ± 10 %, ± 5 % available as special.

DC Leakage Current (DCL max.):

At + 25 °C, + 85 °C, + 125 °C: Leakage current shall not exceed the values listed in the Standard Ratings Tables.

Life Test: Capacitors are capable of withstanding a 2000 h life test at a temperature of + 85 °C or + 125 °C at the applicable DC working voltage.

Following the life test:

- DCL shall not exceed the initial requirements or 1 μA, whichever is greater.
- The ESR shall meet the initial requirement.
- Change in capacitance shall not exceed 10 % from the initial measurement. For capacitors with voltage ratings of 15 WV_{DC} and below, change in capacitance shall not exceed + 10 %, - 25 % from the initial measurement.

ORDERING INFORMATION

109D	207	X0	006	C	0	E3
MODEL	CAPACITANCE	CAPACITANCE TOLERANCE	DC VOLTAGE RATING AT + 85 °C	CASE CODE	STYLE NUMBER	RoHS COMPLIANT
This is expressed in picofarads. The first two digits are the significant figures. The third is the number of zeros to follow	X0 = ± 20 % X9 = ± 10 % X5 = ± 5 % Special Order	This is expressed in volts. To complete the three-digit block, zeros precede the voltage rating. A decimal point is indicated by an "R" (6R3 = 6.3 V)	See Ratings and Case Codes Table	0 = No outer sleeve. Standard 2 = Outer plastic film insulation	E3 = 100 % tin termination (RoHS compliant) Blank = SnPb termination (standard design)	

Note

Packaging: The use of formed plastic trays for packaging these axial lead components is standard. Tape and reel is not recommended due to the unit weight.

DIMENSIONS in inches [millimeters]

Wet Tantalum Capacitors Sintered Anode TANTALEX® Capacitors Hermetically-Sealed with True Glass-to-Tantalum Seal

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 85 °C and with voltage derating to two-thirds the + 85 °C rating at + 125 °C. Use of Type 138D capacitors for high temperature applications is recommended.

Capacitance Tolerance: At 120 Hz, + 25 °C. ± 20 % standard. ± 10 %, ± 5 % available as special.

DC Leakage Current (DCL Max.): At + 25 °C, + 85 °C and + 125 °C: Leakage current shall not exceed the values listed in the Standard Ratings tables.

Life Test: Capacitors are capable of withstanding a 2000 h life test at a temperature of + 85 °C or + 125 °C at the applicable rated DC working voltage.

FEATURES

- Terminations: standard tin/lead (SnPb), 100 % tin (RoHS compliant) available
- Improved reliability through the use of a glass-to-tantalum true hermetic anode seal is the prime feature of the Type 138D sintered anode TANTALEX® capacitor. This construction offers outstanding resistance to thermal shock.
- Model 138D is the commercial equivalents of Tansitor styles WT, UWT, Mallory-NACC styles TLX, TXX and Military styles CL66, CL67, CLR65, and CLR69, designed to meet the performance requirements of Military Specification MIL-PRF-39006/09/21. Capacitors in accordance with military specifications should be ordered by their military part numbers.
- Compliant to RoHS Directive 2002/95/EC

RoHS*
COMPLIANT

Following the life test:

- DCL shall not exceed 125 % of the original requirement.
- The ESR shall not exceed 200 % of the initial requirement.
- Change in capacitance value shall not exceed the percentages below.
 - 6 WV_{DC} Units: + 10 % to - 25 % of initial measurement.
 - 8 WV_{DC} and 10 WV_{DC} Units: + 10 % to - 20 % of initial measurement.
 - 15 WV_{DC} Units: + 10 % to - 15 % of initial measurement.
 - 20 WV_{DC} and above: ± 10 % of initial measurement.

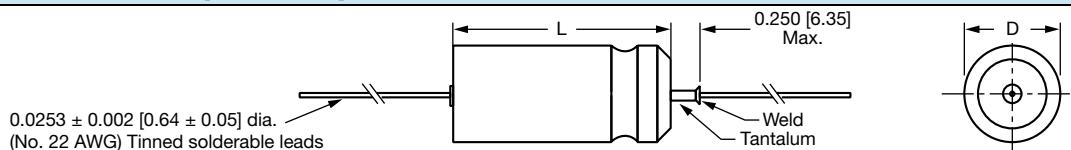

ORDERING INFORMATION

138D	306	X0	006	C	2	E3
MODEL	CAPACITANCE	CAPACITANCE TOLERANCE	DC VOLTAGE RATING AT + 85 °C	CASE CODE	TERMINATION	RoHS COMPLIANT
	This is expressed in picofarads. The first two digits are the significant figures. The third is the number of zeros to follow	X0 = ± 20 % X9 = ± 10 % X5 = ± 5 % Special Order	This is expressed in volts. To complete the three-digit block, zeros precede the voltage rating. A decimal point is indicated by an "R" (6R3 = 6.3 V)	See Ratings and Case Codes table	0 = No outer sleeve 2 = Outer plastic film insulation	E3 = 100 % tin termination (RoHS compliant) Blank = SnPb termination (standard design)

Note

Packaging: The use of formed plastic trays for packaging these axial lead components is standard. Tape and reel is not recommended due to the unit weight.

For capacitors with $\pm 10\%$ tolerance, change the digit following the letter "X" to "9". For RoHS compliant add "E3".

TYPICAL CURVES OF IMPEDANCE AS A FUNCTION OF FREQUENCY AT VARIOUS TEMPERATURES

PERFORMANCE CHARACTERISTICS

- Operating Temperature: Capacitors are designed to operate over the temperature range of - 55 °C to + 125 °C.
- DC Working Voltage:** The DC working voltage is the maximum operating voltage for continuous duty at the rated temperature.
- Surge Voltage:** The surge DC rating is the maximum voltage to which the capacitors should be subjected under any conditions. This includes transients and peak ripple at the highest line voltage. The surge voltage of capacitors rated below 150 V is 115 % of the rated DC working voltage. The surge voltage of capacitors rated at 150 V DC is 165 volts.
- Surge Voltage Test:** Capacitors shall withstand the surge voltage test applied through a $1000 \Omega \pm 10\%$ resistor in series with the capacitor and voltage source at the rate of one-half minute on, four and one-half minutes off, for 1000 successive test cycles at + 85 °C or + 125 °C.
- Capacitance Tolerance:** The capacitance of all capacitors shall be within the specified tolerance limits of the nominal rating.

UP TO + 85 °C WORKING VOLTAGE (V)	AT + 125 °C WORKING VOLTAGE (V)	UP TO + 85 °C WORKING VOLTAGE (V)	AT + 125 °C WORKING VOLTAGE (V)
6	4	35	22
8	5	50	30
10	7	60	40
15	10	75	50
20	13	100	70
25	15	125	85
30	20	150	100

- Capacitance measurements shall be made by the bridge method at or referred to, a frequency of 120 Hz at a temperature of + 25 °C. A polarizing voltage shall be used of such magnitude that there shall be no reversal of polarity due to the AC component. The maximum AC voltage will be 1 volt rms applied during measurement.
- Capacitance Change With Temperature:** The capacitance change with temperature shall not exceed the limits given in the Standard and Extended Ratings Table for each capacitor.
- Equivalent Series Resistance:** Measurements shall be made by the bridge method at or referred to, a frequency of 120 Hz at a temperature of + 25 °C. A polarizing voltage shall be used of such magnitude that there shall be no reversal of polarity due to the AC component. The maximum AC voltage will be 1 V_{rms} applied during measurement.
 - The equivalent series resistance shall not exceed the maximum value in ohms listed in the Standard and Extended Ratings Table for each capacitor.
 - The dissipation factor may be calculated from the equivalent series resistance and capacitance values as shown:

$$DF = \frac{2\pi fRC}{10^4}$$

where:
 DF = Dissipation Factor in %
 R = ESR in ohms
 C = Capacitance in μ F
 f = frequency in Hz

At 120 Hz, the above equation becomes:

$$DF = \frac{R \times C}{13.26}$$

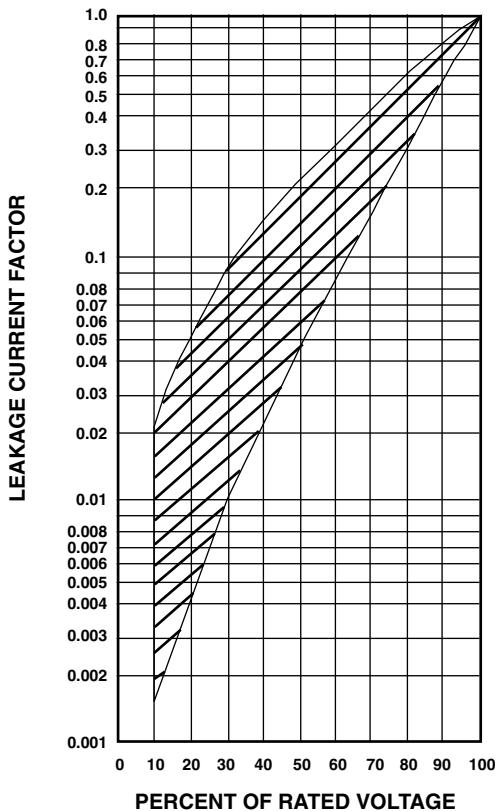

PERFORMANCE CHARACTERISTICS (Continued)

For example, percent dissipation factor of a 30 μF , 6 V capacitor, which has a maximum ESR of 3.4 Ω at + 25 °C and 120 Hz, would be calculated as shown:

$$DF = \frac{2\pi \times 120 \times 3.4 \times 30}{10^4} = \frac{3.4 \times 30}{13.26} = 7.7 \%$$

7. **Leakage Current:** Measurements shall be made at the applicable rated working voltage at + 25 °C ± 5 °C through application of a steady source of power, such as a regulated power supply. The total resistance in series with each capacitor shall be between 1000 Ω and 10 000 Ω . The voltage shall be applied to the capacitor for 5 minutes before making the leakage current measurement.
- 7.1 The maximum leakage current for any capacitor shall not exceed the value in microamperes listed in the Standard and Extended Ratings Table for each capacitor.

Note: leakage current varies with applied voltage. See graph below for the appropriate adjustment factor.

LEAKAGE AS A FUNCTION OF VOLTAGE AND TEMPERATURE

8. **Low Temperature Impedance:** The impedance of any capacitor at - 55 °C at 120 Hz, shall not exceed the values given in the Standard and Extended Ratings tables.

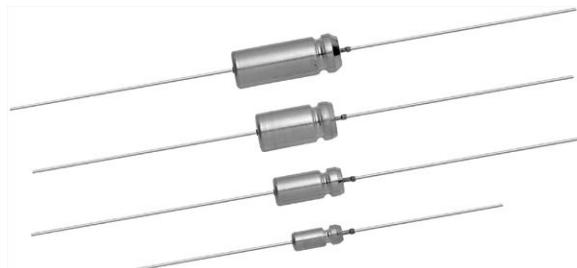

9. **Life Test:** Capacitors are capable of withstanding a 2000 h life test at a temperature of + 85 °C or + 125 °C at the applicable rated DC working voltage.
10. **High Frequency Vibration:** Capacitors shall withstand vibration from 10 Hz to 2000 Hz at 20 g when tested.
11. **Lead Pull Test:** Capacitors shall withstand a lead tensile stress of 3 pounds (13.2 N) for 30 s, applied axially.
12. **Marking:** Capacitors shall be marked with Sprague® and/or the Sprague trademark 2, the Sprague type (138D); rated capacitance and tolerance (the tolerance shall be coded, using the list shown in How to Order); rated DC working voltage at + 85 °C; the standard EIA date code of manufacture.

GUIDE TO APPLICATION

1. **Ripple Current:** All capacitors will withstand rms ripple currents as listed for each capacitor.
- 1.1 The rms ripple current rating is independent of temperature or frequency within the following limitations:
 - 1.1.1 At frequencies of less than 120 Hz, the rated rms ripple current must be multiplied by the factors shown:

FREQUENCY IN HERTZ			
25	50	60	100
0.36	0.59	0.65	0.88
 - 1.1.2 The sum of the peak AC voltage plus the DC voltage shall not exceed the DC working voltage of the capacitor.
 - 1.1.3 The sum of the negative peak AC voltage, plus the applied DC voltage shall not allow a voltage reversal.
2. Cleaning wiring boards with Type 138D capacitors: Customary cleaning solvents used in the electronics industry at present will not affect Type 138D capacitors. However, the use of ultrasonic cleaning techniques is not recommended under any circumstances.
3. **Apparent Capacitance:** Note that in timing circuit applications, the circuit designer must take into account two important variables which affect any electrolytic capacitor. These are the internal leakage resistance of the capacitor and its dielectric absorption, which will depend on the elapsed time since the capacitor was last energized. In applications where electrolytic capacitors are subjected to DC energy, or in effect, extremely low frequencies, the value of the apparent capacitance will be somewhat higher than that which is measured at 120 Hz.
4. **No Reverse Voltage:** The application of reverse voltage to these capacitors will cause internal damage. The resulting damage will lead to immediate or delayed failure of the unit. This will take the form of a catastrophic short circuit with possible expulsion of the electrolyte.

Wet Tantalum Capacitors with Glass-to-Tantalum Hermetic Seal, Sintered Anode TANTALEX® Capacitors

FEATURES

- Terminations: standard tin/lead (SnPb), 100 % tin (RoHS compliant) available Improved reliability through the use of a glass-to-tantalum true hermetic anode seal is the prime feature of the type 138D sintered anode
- Hermetic glass-to-tantalum seal
- High CV per unit volume
- Extremely low leakage current
- Wide temperature range: - 55 °C to + 175 °C
- Improved reliability through the use of a glass-to-tantalum true hermetic anode seal is the prime feature of the 738D and CT9 sintered anode TANTALEX® capacitor. This construction eliminates all internal lead welds while retaining the strength of internal lead-welded parts.
- The construction offers outstanding resistance to thermal shock
- Compliant to RoHS Directive 2002/95/EC

Note

* Pb containing terminations are not RoHS compliant, exemptions may apply

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 85 °C and with voltage derating to two-thirds the + 85 °C rating at + 125 °C. Capable of + 175 °C operation at reduced voltage. Use of Type 135D capacitors for high temperature applications is recommended.

Capacitance Tolerance: At 120 Hz, + 25 °C. ± 20 % standard. ± 10 %, ± 5 % available as special.

DC Leakage Current (DCL Max.): At + 25 °C, + 85 °C and + 125 °C: Leakage current shall not exceed the values listed in the Standard Ratings tables.

Life Test: Capacitors are capable of withstanding a 2000 h life test at a temperature of + 85 °C or + 125 °C at the applicable rated DC working voltage.

APPROVALS

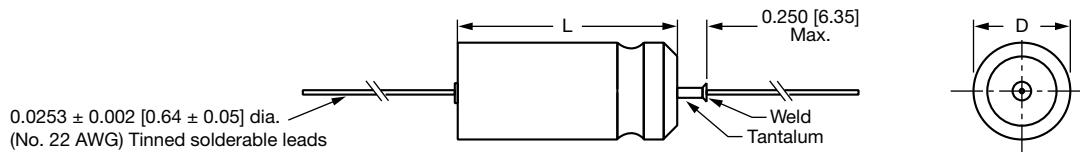

CECC 30202-004 CT9 style

ORDERING INFORMATION

CT9 738D	226	X0	100	B	2	E3
MODEL	CAPACITANCE	CAPACITANCE TOLERANCE	DC VOLTAGE RATING AT + 85 °C	CASE CODE	STYLE NUMBER	RoHS COMPLIANT
This is expressed in picofarads. The first two digits are the significant figures. The third is the number of zeros to follow	X0 = ± 20 % X9 = ± 10 % X5 = ± 5 % Special Order	This is expressed in volts. To complete the three-digit block, zeros precede the voltage rating. A decimal point is indicated by an "R" (6R3 = 6.3 V)	See Ratings and Case Codes table	0 = Bare case 2 = Outer polyester film insulation 6 = High temperature film insulation (above + 125 °C)	E3 = 100 % tin termination (RoHS compliant design) Blank = SnPb termination (standard design)	

Note

- Packaging: The use of formed plastic trays for packaging these axial lead components is standard. Tape and reel is not recommended due to the unit weight

Wet Tantalum Capacitors with Epoxy End-Fill, Sintered Anode, TANTALEX® Capacitors, CECC 30202-013 Approved

FEATURES

- Terminations: standard tin/lead (SnPb), 100 % tin (RoHS compliant) available
- For 125 °C operation
- Very high CV per unit volume
- Long shelf life in excess of ten years
- Extremely low leakage current
- Epoxy end-filled for better shock and vibration performance
- Compliant to RoHS Directive 2002/95/EC

RoHS*
COMPLIANT

Note

* Pb containing terminations are not RoHS compliant, exemptions may apply

APPROVALS

CECC 30202-013 (6-125 V)

APPLICATIONS

Designed for industrial and telecommunications applications, offers higher microfarad value per unit volume than any other type. The epoxy resin end-fill construction also offers improved mechanical strength, outstanding resistance to temperature cycling, and trouble-free application when flow-soldering capacitors to printed circuit board.

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 125 °C

Capacitance Tolerance: ± 20 % is standard; ± 10 % and ± 5 % available as specials

Capacitance Range: 3.6 µF to 2200 µF

Life Test: Capacitors are capable of withstanding a 2000 h life test at a temperature of + 85 °C or + 125 °C at the applicable rated DC working voltage.

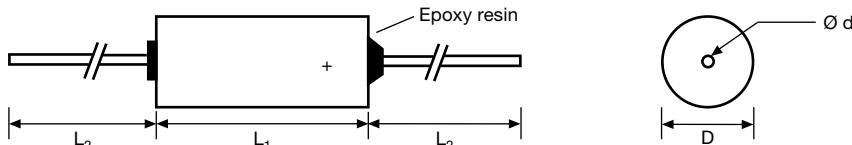

ORDERING INFORMATION

769D	306	X0	006	A	2	E3
MODEL	CAPACITANCE	CAPACITANCE TOLERANCE	DC VOLTAGE RATING AT + 85 °C	CASE CODE	STYLE NUMBER	RoHS COMPLIANT
This is expressed in picofarads. The first two digits are the significant figures. The third is the number of zeros to follow	X0 = ± 20 % X9 = ± 10 % X5 = ± 5 % special order	This is expressed in volts. To complete the three-digit block, zeros precede the voltage rating	See Ratings and Case Codes table	0 = Bare case 2 = Outer plastic-film insulation	E3 = tin termination (RoHS compliant design) Blank = SnPb termination (standard design)	

Note

- Packaging: The use of formed plastic trays for packaging these axial lead components is standard. Tape and reel is not recommended due to the unit weight

DIMENSIONS in inches [millimeters]

Wet Tantalum Capacitors Tantalum-Case with Glass-to-Tantalum Hermetic Seal for - 55 °C to + 200 °C Operation

FEATURES

- Terminations: standard tin/lead (SnPb), 100 % tin (RoHS compliant) available
- Standard and extended ratings
- Model 135D tantalum-case electrolytic capacitors incorporate the advantages of all the varieties of electrolytic capacitors and eliminate most of the disadvantages. These units have a 3 V reverse voltage capability at + 85 °C and a higher ripple current capability than any other electrolytic type with similar combinations of capacitance and case size.
- Designed for the aerospace applications, this capacitor was developed under partial sponsorship of the Marshall Space Flight Center, National Aeronautics and Space Administration. The capacitors have a high resistance to damage from shock and vibration. Extended range ratings and high temperature designs are available.
- Model 135D capacitors are commercial equivalents of Transistor Style; AQ, AR, HAQ, HAR, Mallory-NACC Style; TLT, TXT, THT, THX and Military Style CLR79 and CLR81, designed to meet the performance requirements of Military Specification MIL-PRF-39006/22/25. Capacitors to meet MIL-PRF-39006/22/25 should be ordered by part numbers shown in that specification.
- Compliant to RoHS Directive 2002/95/EC

RoHS*
COMPLIANT

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 85 °C
(To + 200 °C with voltage derating)

Capacitance Tolerance: At 120 Hz, + 25 °C. ± 20 % standard. ± 10 %, ± 5 % available as special.

DC Leakage Current (DCL Max.): At + 25 °C and above: Leakage current shall not exceed the values listed in the Standard Ratings Tables.

Life Test: Capacitors are capable of withstanding a 2000 h life test at a temperature of + 85 °C or + 125 °C at the applicable rated DC working voltage.

Following life test:

- DCL, measured at + 85 °C rated voltage, shall not be in excess of the original requirement.
- The equivalent series resistance shall not exceed 150 % of the initial requirement.
- Change in capacitance shall not exceed 10 % from the initial measurement.

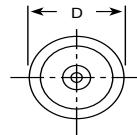

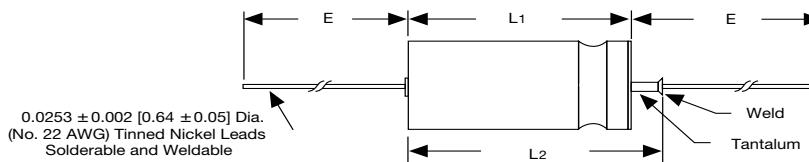

ORDERING INFORMATION

135D	306	X0	006	C	2	E3
MODEL	CAPACITANCE	CAPACITANCE TOLERANCE	DC VOLTAGE RATING AT + 85 °C	CASE CODE	STYLE NUMBER	RoHS COMPLIANT
	This is expressed in picofarads. The first two digits are the significant figures. The third is the number of zeros to follow	X0 = ± 20 % X9 = ± 10 % X5 = ± 5 %	This is expressed in volts. To complete the three-digit block, zeros precede the voltage rating. A decimal point is indicated by an "R" (6R3 = 6.3 V)	See ratings and case codes table	Std. temperature (max. + 125 °C) 0 = No insulating sleeve 2 = Polyester insulation sleeve 3 = High temperature film insulation High temperature (max. + 200 °C) 6 = High temperature film insulation 8 = No insulating sleeve	E3 = 100 % tin termination (RoHS compliant design) Blank = SnPb termination (standard design)

Note

Packaging: The use of formed plastic trays for packaging these axial lead components is standard. Tape and reel is not recommended due to the unit weight.

* Pb containing terminations are not RoHS compliant, exemptions may apply

30	20	15	
35	23	18	
50	30	25	
60	40	30	
75	50	38	
100	65	50	
125	85	63	

- (1) Consult Vishay Sprague for information at + 200 °C. See paragraph 9.3.
2. **DC Working Voltage:** The DC working voltage is the maximum operating voltage for continuous duty at the rated temperature.
3. **Surge Voltage:** The surge voltage rating is the maximum voltage to which the capacitors should be subjected under any conditions. This includes transients and peak ripple at the highest line voltage.
- 3.1 The surge voltage of capacitors is 115 % of rated DC working voltage.
- 3.2 **Surge Voltage Test:** Capacitors shall withstand the surge voltage applied through a $1000 \Omega \pm 10\%$ resistor in series with the capacitor and voltage source at the rate of one-half minute on, four and one-half minutes

off, for 1000 successive test cycles at + 85 °C or + 125 °C.

- 3.3. Following the surge voltage test, the capacitance at + 25 °C shall not have changed by more than $\pm 10\%$ and the equivalent series resistance and DC leakage current will not exceed the values shown in the "Standard Ratings Table" for each capacitor.
4. **Capacitance Tolerance:** The capacitance of all capacitors shall be within the specified tolerance limits of the nominal rating.
- 4.1 Measurements shall be made by the bridge method at or referred to a frequency of 120 Hz at a temperature of + 25 °C. The maximum voltage applied to the capacitors during measurement shall be 1 V_{RMS}. Measurement accuracy of the bridge shall be within $\pm 2\%$.
5. **Capacitance Change With Temperature:** The capacitance change with temperature shall not exceed the values given in the "Standard Ratings Table" for each capacitor.
6. **Equivalent Series Resistance:** Measurements shall be made by the bridge method at, or referred to, a frequency of 120 Hz at a temperature of + 25 °C. A maximum of 1 V_{RMS} shall be applied during measurement.
- 6.1 The equivalent series resistance shall not exceed the maximum value in ohms listed in the "Standard Ratings Table" for each capacitor.

**Wet Tantalum Capacitors Tantalum-Case with Glass-to-Tantalum
Hermetic Seal for - 55 °C to + 200 °C Operation**

Vishay

- 6.2. The dissipation factor may be calculated from the equivalent series resistance and capacitance values as shown:

$$DF = \frac{2\pi fRC}{10^4}$$

where:

DF = Dissipation Factor in %
R = ESR in Ω
C = Capacitance in μF
f = Frequency in Hz

At 120 Hz, the above equation becomes:

$$DF = \frac{R \times C}{13.26}$$

For example, percent dissipation factor of a 30 μF, 6 V capacitor, which has a maximum ESR of 4.0 Ω at + 25 °C and 120 Hz, would be calculated as shown:

$$DF = \frac{2\pi \times 120 \times 4 \times 30}{10^4} = \frac{4 \times 30}{13.26} = 9.05 \%$$

7. **Leakage Current:** Measurements shall be made at the applicable rated working voltage at + 25 °C ± 5 °C through application of a steady source of power, such as a regulated power supply. A 1000 Ω resistor to limit the charging current shall be connected in series with each capacitor under test. Rated working voltage shall be applied to capacitors for 5 minutes before making leakage current measurements.

- 7.1 The maximum leakage current for any capacitor shall not exceed the maximum value in mA listed in the "Standard and Extended Ratings Table" for each capacitor.

Note

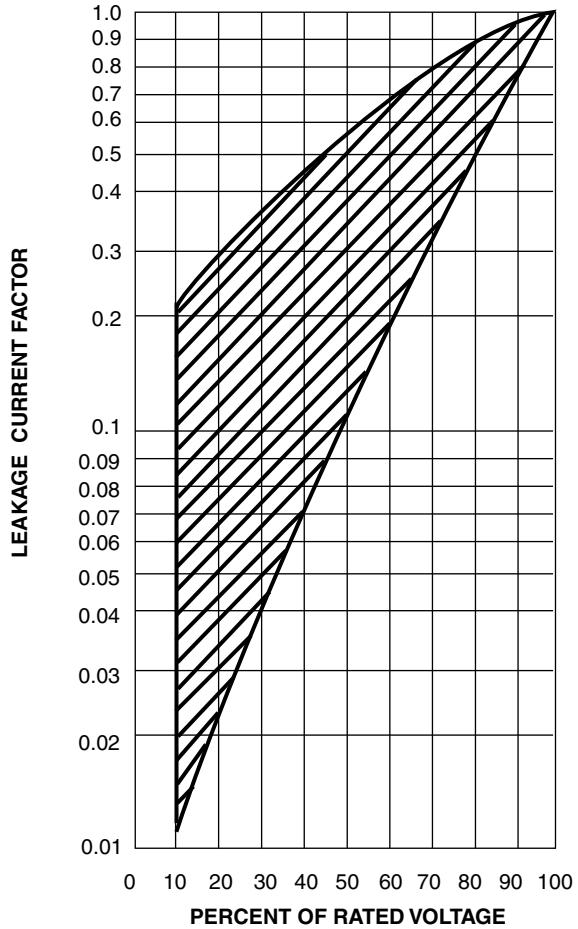

- Leakage current varies with applied voltage. See graph next column for the appropriate adjustment factor

8. **Low Temperature Impedance:** The impedance of any capacitor at - 55 °C at 120 Hz, shall not exceed the values given in the "Standard and Extended Ratings tables".

9. **Life Test:** Capacitors are capable of withstanding a 2000 h life test at a temperature of + 85 °C or + 125 °C at the applicable rated DC working voltage.

- 9.1 Following the life test, the capacitors shall be returned to 25 °C ± 5 °C. The leakage current, measured at the + 85 °C rated voltage, shall not be in excess of the original requirement; the capacitance value shall not exceed 150 % of the initial requirement; the capacitance value shall not change by more than 10 % from the initial measurement.

TYPICAL LEAKAGE CURRENT FACTOR RANGE

- 9.3 Capacitors are capable of withstanding life test at the following conditions:

TEMPERATURE	HOURS	% RATED VOLTAGE
+ 175 °C	2000	50
+ 175 °C	300	65
+ 200 °C	300	60

- 9.4 Following the life test, the capacitors shall be returned to + 25 °C ± 5 °C. The leakage current, at the rated voltage shall not exceed 200 % of the original requirement or ± 10 μA, whichever is greater; the equivalent series resistance shall not be greater than 200 % of the original requirement; the capacitance value shall not increase by more than 10 % or decrease by more than 20 % from the initial measurement.

10. **Ripple Life Test at + 85 °C:** Capacitors shall be tested in accordance with Military Specification MIL-C-39006 except that:
 - a) **Operation Conditions:** This test shall be run at a frequency of $40 \text{ kHz} \pm 2 \text{ kHz}$ sinusoidal and at the RMS ripple current levels specified in the "Standard and Extended Ratings Table".
 - b) Applied DC voltage shall be reduced so that the peak AC voltage plus DC voltage shall not exceed the rated voltage of the capacitor in either the forward or reverse direction.
- 10.1 When tested as specified above, capacitors shall meet the following requirements:
 - a) The DC leakage current at + 25 °C and at + 85 °C shall not exceed the original requirements.
 - b) The capacitance shall not change more than $\pm 15\%$ from the initial measured value.
 - c) The dissipation factor shall not exceed the original requirements.
 - d) Visual examination: There shall be no damage, obliteration of marking or leakage of electrolyte.
11. **Reverse Voltage Test:** Capacitors shall withstand a reverse voltage of $3 V_{DC}$ at + 85 °C or 2 V at + 125 °C for 2000 h. The capacitors shall then be restabilized for 24 h at 85 °C with rated DC forward potential applied through a 1000Ω resistor.
 - 11.1 Following the reverse voltage test, the DC leakage current shall not be in excess of the original requirement; the equivalent series resistance shall not exceed 200 % of the initial requirement; the capacitance value shall not be less than 90 % of the initial measurement.
12. **Mechanical Shock Test:** Capacitors shall withstand a shock of 500 g when tested in accordance with method 213 of MIL-STD-202, test condition D.
 - 12.1 Following the mechanical shock test, capacitors shall be examined for evidence of mechanical damage and leakage of electrolyte. Capacitance, equivalent series resistance, and DC leakage current shall meet the initial requirements.
13. **High Frequency Vibration:** Capacitors shall withstand vibration from 10 Hz to 2000 Hz at 80 g without internal damage when tested in accordance with MIL-STD-202, method 204, test condition H. Electrical measurements made while under these conditions shall show no intermittent contacts, open circuits or short circuits.
 - 13.1 Capacitors shall be securely fastened by means of suitable component clips or brackets.
14. **Random Vibration:** Capacitors shall withstand random vibration at all levels up to 51 g RMS overall when tested in accordance with MIL-STD-202, method 214, test condition II K. The test shall be conducted for 1.5 h in each of three mutually perpendicular directions.
- 14.1 Electrical measurements made during the test shall show no intermittent contacts, open circuits or short circuits.
15. **Pull Test:** Leads shall withstand a tensile stress of 3 lbs. (1.4 kg) for 30 s applied axially in accordance with MIL-STD-202, method 211, test condition A.
16. **Lead Bend Test:** Leads shall meet the bend test specified in Military Standard MIL-STD-202, method 211 A, condition C except that the number of bends shall be 4.
17. **Moisture Resistance:** Capacitors shall withstand the moisture resistance cycling test specified in Military Standard MIL-STD-202, method 106, without departure from the original limits of capacitance, equivalent series resistance and DC leakage current.
18. **Reduced Pressure:** Capacitors shall be stabilized at a reduced atmospheric pressure of 0.82" [20.83 mm] of mercury for a period of 5 min. Rated DC voltage shall be applied for 1 min. Capacitors shall not flash over nor shall end seals be damaged by this nor should the capacitors be electrically effected insofar as capacitance, equivalent series resistance or leakage current is concerned.
19. **Seal Test:**
 - 19.1 Capacitors shall be tested in accordance with MIL-STD-202, method 112, test condition C, procedure IIIa. Specimens shall be pressurized at 4 atmospheres (gage) for 4 h.
20. **Thermal shock:** Capacitors shall be subjected to 300 cycles of thermal shock in accordance with Military specification MIL-C-39006.
 - 20.1 Following the thermal shock test, capacitor leakage current shall not exceed twice the initial requirement.
21. **Marking:** Capacitors shall be marked with Sprague, the Sprague type (135D); rated capacitance and tolerance (the tolerance shall be coded, using the list shown in How to Order); rated DC working voltage at + 85 °C; the standard EIA date code of manufacture.
 - 21.1 Polarity shall be indicated by plus signs (+) adjacent to the positive terminal.

Wet Tantalum Capacitors Tantalum-Case with Glass-to-Tantalum Hermetic Seal for - 55 °C to + 200 °C Operation

Vishay

GUIDE TO APPLICATION

- 1. AC Ripple Current:** Subjecting a capacitor to an AC voltage causes an AC current to flow through it. The amplitude of the current is dependent on the impedance of the capacitor at the frequency of the applied signal:

$$I = \frac{V}{Z}$$

where:

I = Ripple current

V = Applied AC voltage

Z = Impedance of capacitor (frequency dependent)

This current causes heating in the capacitor because of I^2R losses (R is the equivalent series resistance at the applied frequency). This heating or power dissipation, is one of the limiting factors of the capacitor's ripple current rating.

CASE CODE	MAXIMUM PERMISSIBLE POWER DISSIPATION AT + 25 °C (W) IN FREE AIR
C	1.00
F	1.55
T	1.75
K	1.95

These power dissipation ratings are based on a calculated + 50 °C internal temperature rise in still air. The maximum allowable ripple currents given in the "Standard and Extended Ratings Tables" are based on these ratings and the maximum equivalent series resistance at that frequency.

The relationship is written as follows:

$$P = I^2 R$$

where:

P = Maximum power

I = Maximum ripple current

R = Equivalent series resistance

Therefore:

$$I = \sqrt{\frac{P}{R}}$$

where:

R is in Ω

P is in W

I is in A_{RMS}

- 2. AC Ripple Voltage:** In operation, the peak voltage across the capacitor (DC working voltage plus peak ripple voltage) must not exceed the rated working voltage of the capacitor. The DC component of the applied voltage should be sufficiently large to prevent polarity reversal in excess of 3 V at + 85 °C or 2 V at 125 °C.

There will be a point at the lower frequency and capacitance values when the peak AC voltage will be the limiting factor on the ripple current - not its heating effects.

For example:

Given a 25 µF, 8 V capacitor in the "C" case code and assuming a ripple current application at a frequency of 120 Hz, the total maximum allowable peak to peak voltage at + 25 °C is:

$$8 V_F + 3 V_R = 11 V_{pp}$$

In order to allow the full swing of 11 V_{pp} and not exceed rated forward or rated reverse, a DC bias of 2.5 V is assumed to be applied.

From the "Standard Ratings Table", the maximum ripple current at 40 kHz is 0.820 A. Compensating for the lower frequency from the "Ripple Current Multipliers" tables:

$$I_{RMS} (120 \text{ Hz}) = 0.820 \text{ A} \times 0.6 = 0.492 \text{ A}_{RMS}$$

This current rating is calculated strictly on the basis of maximum power dissipation. Now calculate what impressed voltage this amount of current will cause across this capacitor.

Assuming a sinusoidal voltage, calculate the rated peak to peak current:

$$I_{pp} = I_{RMS} \times \sqrt{2} = 0.492 \times 2.828 = 1.39 \text{ A}_{pp}$$

$$V_{pp(\text{impressed})} = I_{pp} \times Z_C (120 \text{ Hz})$$

where:

$$Z_{C(120 \text{ Hz})} = (\sqrt{(ESR)^2 + (X_{C(120 \text{ Hz})})^2})^2$$

ESR = 4 Ω (from "Standard Ratings" table)

$$X_C = \frac{1}{2\pi f C} = \frac{1}{2(\pi)(120)(25 \times 10^{-6})} = 53.1 \Omega$$

Therefore:

$$Z_C = \sqrt{(4)^2 + (53.1)^2} = 53.3 \Omega$$

and

$$\begin{aligned} V_{pp(\text{impressed})} &= 1.39 \text{ A}_{pp} \times 53.3 \Omega \\ &= 74.1 \text{ V}_{pp} > 11 \text{ V}_{pp} \end{aligned}$$

Therefore, the peak voltage of the capacitor is the limiting factor for the ripple current and can be calculated as follows:

$$\text{Max } I_{pp} = \frac{V_{C(pp)(\text{allowed})}}{Z_C} = \frac{11.0 \text{ V}}{53.3 \Omega} = 0.206 \text{ A}_{pp}$$

or

$$\frac{0.206}{2\sqrt{2}} = 0.073 \text{ A}_{\text{RMS}} \text{ at } 120 \text{ Hz}$$

Verifying that the 40 kHz rating does not exceed the peak voltage limitations:

$$I_{\text{rated}} = 0.820 \text{ A}_{\text{RMS}}$$

$$I_{\text{pp(rated)}} = 0.820 \times 2\sqrt{2} = 2.32 \text{ A}_{\text{pp}}$$

$$Z_{C(40 \text{ kHz})} = (\sqrt{(ESR_{(40 \text{ kHz})})^2 + (X_{C(40 \text{ Hz})})^2})$$

where:

$$ESR_{(40 \text{ kHz})} = 4 \Omega_{(120 \text{ Hz})} \times 0.34$$

(from Extended Range tables) = 1.36 Ω

and:

$$X_{C(40 \text{ kHz})} = \frac{1}{2\pi f C}$$

$$= \frac{1}{2\pi \times (40 \times 10^3) \times (25 \times 10^{-6})} = 0.159 \Omega$$

thus:

$$Z_{C(40 \text{ kHz})} = \sqrt{(1.36)^2 + (0.159)^2} = 1.37 \Omega$$

Therefore the impressed voltage is:

$$V_{\text{Cpp}} = Z_{\text{Cpp}} I_{\text{pp}} = 1.37 \Omega \times 2.32 \text{ A}_{\text{pp}} = 3.18 \text{ V}_{\text{pp}}$$

and:

$$3.18 \text{ V} < 11 \text{ V}$$

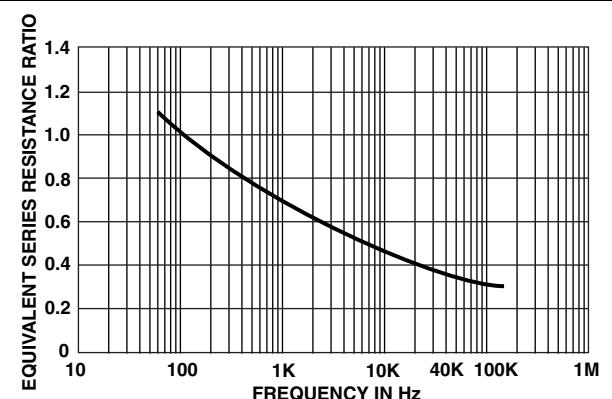

Therefore, if the capacitor is biased between - 1.41 V DC and + 6.41 V_{DC}, it can withstand the rated ripple

current, which is based only on the maximum allowable power dissipation.

3. **Ripple Current Multipliers:** The "Standard and Extended Ratings" tables list the maximum permissible RMS ripple current at 40 kHz for each rating. These values are based on the maximum power dissipation allowed at that frequency.

This ripple current will cause heating, which adds to the ambient temperature. The higher ambient temperatures, voltage derating or current derating is required (see "Ripple Current Multipliers" tables). Also shown are the multipliers for ripple currents at various frequencies, caused by the frequency dependence of the (ESR) equivalent series resistance. (see "Typical ESR as a Function of Frequency" chart)

TYP. ESR AS A FUNCTION OF FREQUENCY

RIPPLE CURRENT MULTIPLIERS (120 Hz to 1 kHz)

Wet Tantalum Capacitors Tantalum-Case with Glass-to-Tantalum Hermetic Seal for - 55 °C to + 200 °C Operation

Vishay

4. **Storage Life:** A storage life of 10 years or more, with no voltage at room temperature, may be expected.
5. **Series Operation:** These capacitors may be used in some series applications. For such an application to achieve a high voltage rating (e.g. 28 μ F, 250 V using two 56 μ F, 125 V capacitors), a suitable balancing network of resistors in parallel with the capacitors is required to evenly distribute the voltage across each capacitor. The value of the appropriate resistor will be dependent on the DC leakage current of the capacitors and, as recommended value, it should be selected to allow a current equal to 10 times the DC leakage current limit (see "Standard and Extended Ratings" table at the appropriate temperature) to flow parallel to each capacitor.

For example:

For example:

$$R = \frac{V_C}{10 I_{DCL}} = \frac{125 V}{200 \mu A} = 625 k\Omega$$

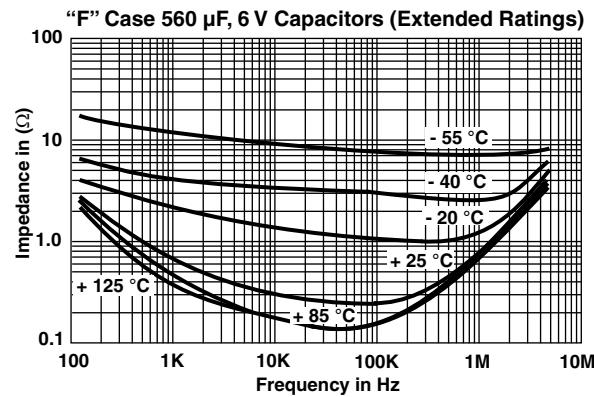

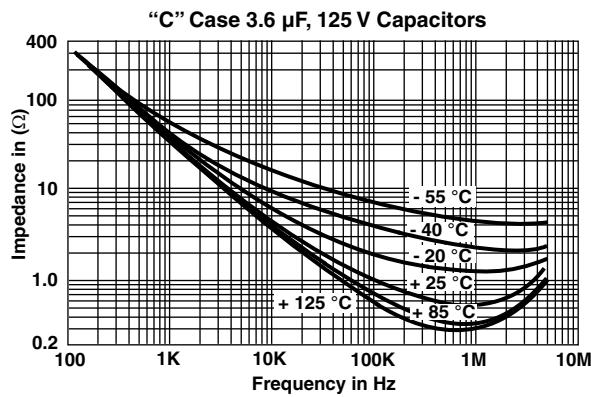

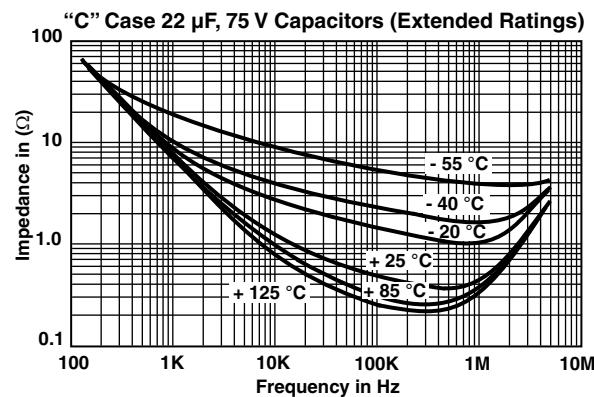

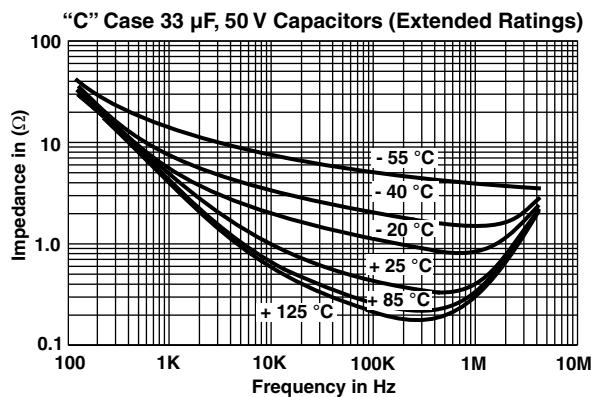

where:

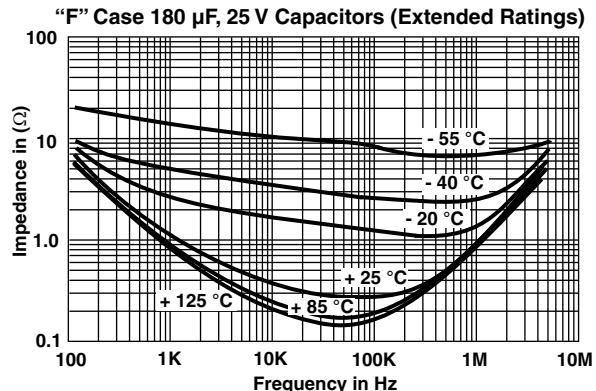

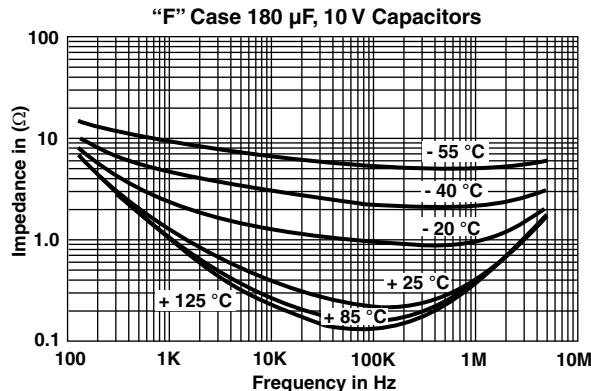

V_C = Voltage across capacitor

I_{DCL} = DC leakage current at + 85 °C from "Standard and Extended Ratings" table

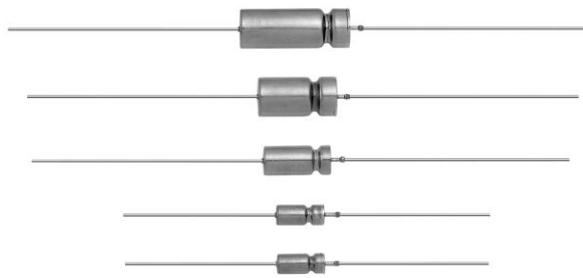

6. **Special Applications:** Vishay Sprague product specialists will, on request, furnish recommendations for your particular application.

TYPICAL CURVES OF IMPEDANCE, AS A FUNCTION OF FREQUENCY

TYPICAL CURVES OF IMPEDANCE, AS A FUNCTION OF FREQUENCY

Wet Tantalum Capacitors with Glass to Tantalum Hermetic Seal CECC 30202 Approved

FEATURES

- Terminations: standard tin/lead (SnPb), 100 % tin (RoHS compliant) available
- For - 55 °C to + 125 °C operation
- All tantalum case
- Glass to tantalum hermetic seal
- Low ESR
- High CV per unit volume
- Extremely low leakage current
- High permissible ripple current
- 3 V reverse voltage capability
- Compliant to RoHS Directive 2002/95/EC

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 85 °C
(To + 125 °C with voltage derating)

Capacitance Tolerance: At 120 Hz, + 25 °C. ± 20 % standard. ± 10 %, ± 5 % available as special

DC Leakage Current (DCL Max.):

At + 25 °C and above: Leakage current shall not exceed the values listed in the Standard Ratings Tables

APPROVALS

- CECC-30202-001 style 735D
- CECC-30202-801 style 735DE
- CECC 30202-005 style CT79

APPLICATIONS

Designed specifically for the severe operating environment of aerospace applications, this capacitor was developed under partial sponsorship of the Marshall Space Flight Center, National Aeronautics and Space Administration. To meet aerospace requirements, the capacitors have a high resistance to damage from shock and vibration.

ORDERING INFORMATION						
CT79 735D 735DE	226	X0	025	A	2	E3
MODEL	CAPACITANCE	CAPACITANCE TOLERANCE	DC VOLTAGE RATING AT + 85 °C	CASE CODE	STYLE NUMBER	RoHS COMPLIANT
	This is expressed in picofarads. The first two digits are the significant figures. The third is the number of zeros to follow	X0 = ± 20 % X9 = ± 10 % X5 = ± 5 %	This is expressed in volts. To complete the three-digit block, zeros precede the voltage rating. A decimal point is indicated by an "R" (6R3 = 6.3 V)	See Table of Dimensions	0 = Bare case 2 = Outer polyester film insulation 3 = High temperature film insulation	E3 = 100 % tin termination (RoHS compliant design) Blank = SnPb termination (standard design)

Note

Packaging: The use of formed plastic trays for packaging this type of axial lead component is standard. Tape and reel is not recommended due to the unit weight.

* Pb containing terminations are not RoHS compliant, exemptions may apply

Tantalum Case Low ESR

Wet Tantalum Capacitors, Military Established Reliability, MIL-PRF-39006 Qualified Styles CLR65, 79, 81, 90, 91

FEATURES

- Hermetically sealed
- Metal cased
- Axial lead
- Tubular

Established Reliability Tantalum Capacitors to Military Specification MIL-PRF-39006: In accordance with the Military Specification, MIL-PRF-39006 all capacitors are marked with the Military Part Number (M39006/xx-xxxx) rather than the older Style designation (CLRxxxxxxxx) and should be ordered as such.

For information on the performance characteristics of these capacitors, please refer to the latest issue of the Military

Specification. MIL-PRF-39006 establishes 1000 h failure rate levels of 2 %, 1 %, 0.1 %, and 0.01 %. When ordering these parts, care must be exercised that the correct part number expressing the appropriate failure level be specified.

Each order for Military Style capacitors requiring government inspection must state whether inspection is to be at the destination or at the Vishay Sprague plant. Orders requiring source inspection cannot be shipped until this has been accomplished

Notes

* Dash number will include the letter "H" to indicate the optional vibration and shock requirements (i.e., 51 g random vibration, 80 g sinusoidal vibration and 500 g shock).

** For ripple current limits at various temperatures, voltages and frequencies, see Ripple Current Table.

Notes

- At + 125 °C the rated voltage of the capacitors decreases to 66 2/3 percent of the + 85 °C rated voltage.
- The peak of the applied AC ripple voltage plus the applied DC voltage must not exceed the DC voltage rating of the capacitor either forward or reverse.
- The ripple current listed represents a rating calculated using a maximum internal temperature rise (ΔT) of + 50 °C at 40 kHz at + 85 °C ambient with a maximum peak rated voltage of 66 2/3 percent of the + 85 °C peak voltage rating.
- The maximum allowable internal temperature rise (ΔT) decreases linearly to a calculated + 10 °C rise at + 125 °C ambient.
- The internal temperature rise is directly proportional to the equivalent series resistance of the capacitor and equivalent series resistance increases with decreasing frequency.

Wet Tantalum Capacitors Tantalum-Case with Glass-to-Tantalum Hermetic Seal for - 55 °C to + 125 °C Operation, Low ESR

FEATURES

- Military specification MIL-PRF-39006/30 and 39006/31. Model 136D capacitors are commercial equivalents of Military style CLR90 and CLR91.
- Capacitors to meet the MIL-specs must be ordered by M39006 part numbers shown in the relative specification.
- Terminations: standard tin/lead (SnPb), 100 % tin (RoHS compliant) available
- Standard and extended ratings
- Low ESR
- Compliant to RoHS Directive 2002/95/EC

Note

* Pb containing terminations are not RoHS compliant, exemptions may apply

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 85 °C
(To + 125 °C with voltage derating)

Capacitance Tolerance: At 120 Hz, + 25 °C. ± 20 % standard. ± 10 %, ± 5 % available as special.

DC Leakage Current (DCL Max.): At + 25 °C and above: Leakage current shall not exceed the values listed in the Standard Ratings Tables.

Life Test: Capacitors are capable of withstanding a 2000 h life test at a temperature of + 85 °C or + 125 °C at the applicable rated DC working voltage.

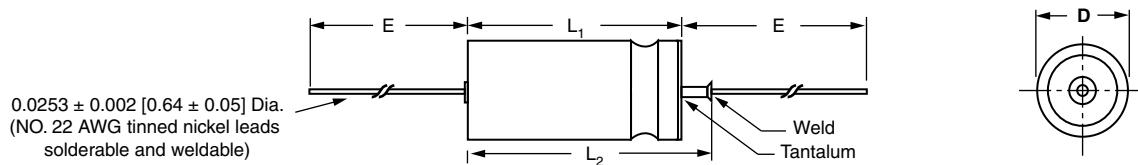

Following life test:

1. DCL, measured at + 85 °C rated voltage, shall not be in excess of the original requirement.
2. The equivalent series resistance shall not exceed 150 % of the initial requirement.
3. Change in capacitance shall not exceed 10 % from the initial measurement.

ORDERING INFORMATION						
136D	306	X0	006	C	2	E3
MODEL	CAPACITANCE	CAPACITANCE TOLERANCE	DC VOLTAGE RATING AT + 85 °C	CASE CODE	STYLE NUMBER	RoHS COMPLIANT
This is expressed in picofarads. The first two digits are the significant figures. The third is the number of zeros to follow		X0 = ± 20 % X9 = ± 10 % X5 = ± 5 %	This is expressed in volts. To complete the three-digit block, zeros precede the voltage rating. A decimal point is indicated by an "R" (6R3 = 6.3 V)	See Ratings and Case Codes table	Std. temperature (max. + 125 °C) 0 = No insulating sleeve 2 = Polyester insulation sleeve 3 = High temperature film insulation	E3 = 100 % tin termination (RoHS compliant design) Blank = SnPb termination (standard design)

Note

- Packaging: The use of formed plastic trays for packaging these axial lead components is standard. Tape and reel is not recommended due to the unit weight.

DIMENSIONS in inches [millimeters]

SuperTan® Wet Tantalum Capacitors with Hermetic Seal

Vishay ST represents a major breakthrough in wet tantalum capacitor technology. Its unique cathode system provides the highest capacitance per unit volume. The design facilitates a doubling of capacitance, lower ESR and higher ripple current rating compared with conventional wet tantalum products. Moreover, the ST has the capacitance stability of a solid tantalum capacitor and there are no circuit impedance restrictions.

The ST is housed in an all tantalum, hermetically sealed case and is manufactured to withstand hazardous environments. The ST is used widely in the defense and aerospace industries and whenever there is a space problem.

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 85 °C (to + 125 °C with voltage derating)

Capacitance Tolerance: At 120 Hz, + 25 °C. $\pm 20\%$ standard. $\pm 10\%$ available as special.

FEATURES

- Very high capacitance
- 10 μ F to 1800 μ F
- 25 V_{DC} to 125 V_{DC}
- Very low ESR
- High ripple current
- All Tantalum case
- Hermetically sealed
- Low DCL
- Axial through-hole terminations: Standard tin/lead (Sn/Pb) 100 % tin (RoHS compliant) available
- Compliant to RoHS Directive 2002/95/EC

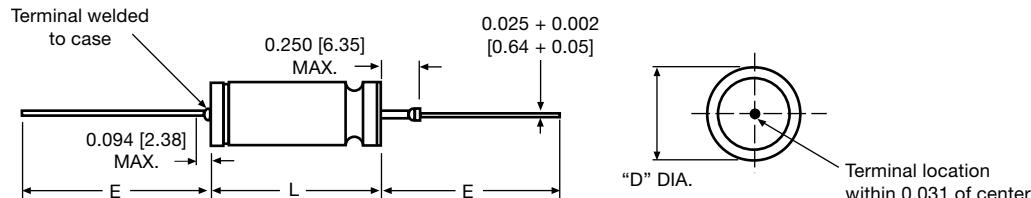

Note

* Pb containing terminations are not RoHS compliant, exemptions may apply

APPLICATION NOTES

- a. No continuous reverse voltage permissible.
- b. The peak of the applied AC ripple and the applied DC voltage must not exceed the DC voltage rating of the capacitor.
- c. Ripple current ratings by part number at 85 °C and 40 kHz are included in the table. Ripple current correction factors for other temperatures and frequencies are given on the next page.
- d. Transient reverse voltage surges are acceptable under the following conditions:
The peak reverse voltage does not exceed 1.5 V and the peak current times the duration of the reverse transient does not exceed 0.05 As. In addition, the repetition frequency of the reverse voltage surge is less than 10 Hz.

DIMENSIONS in inches [millimeters]

CASE CODE	D ± 0.016 [0.41]	MAX. INSULATED (DIA.)	L ₁ + 0.031 [0.79] UNINSULATED	E ± 0.250 [6.3] MAX.

Wet Tantalum Capacitors with Hermetic Seal

Vishay STA represents a major breakthrough in Wet Tantalum capacitor technology. Its unique cathode system, also used in the ST, provides the highest capacitance per unit volume available. The STA combines the inherent reliability of wet tantalum with the capacitance stability of solid tantalum, and there are no circuit impedance restrictions. The range is exceptionally well suited for low voltage filtering and energy storage applications.

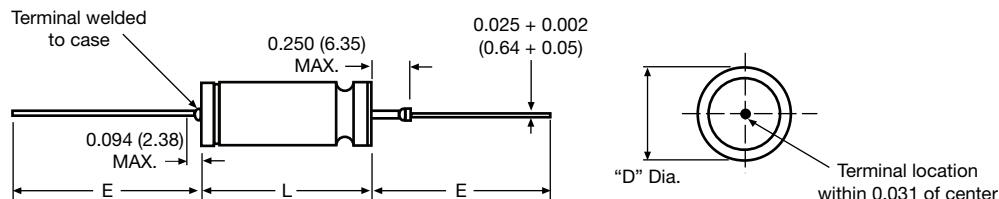

FEATURES

- Very high capacitance
- 150 μF to 4700 μF
- 6 V_{DC} to 15 V_{DC}
- -55 °C to +125 °C

APPLICATIONS NOTES

- a) No continuous reverse voltage permissible.
- b) Transient reverse voltage surges are acceptable under the following conditions:
The peak reverse voltage does not exceed 1.5 V and the peak current times the duration of the reverse transient does not exceed 0.05 As. In addition, the repetition frequency of the reverse voltage surge is less than 10 Hz.
- c) The peak of the applied AC ripple and the applied DC voltage must not exceed the DC voltage rating of the capacitor.
- d) Ripple current ratings by part number at 85 °C and 40 kHz are included in the table. Ripple current correction factors for other temperatures and frequencies are given on the next page.

SuperTan® Extended (STE) Capacitors, Wet Tantalum Capacitors with Hermetic Seal

FEATURES

Vishay SuperTan® Extended (STE) represents a major breakthrough in wet tantalum capacitor technology. Its unique cathode system, also used in the ST, provides the highest capacitance per unit volume available. The STE combines the inherent reliability of wet tantalum with the capacitance stability of solid tantalum, and there are no circuit impedance restrictions. The range is exceptionally well suited for low voltage filtering and energy storage applications. Ideal for designs targeting the military and aerospace industry.

The SuperTan® Extended (STE) is housed in an all tantalum, hermetically sealed case and is manufactured to withstand high stress and hazardous environments.

- Axial through-hole terminations: Standard tin/lead (Sn/Pb) 100 % tin (RoHS compliant) available
- Compliant to RoHS Directive 2002/95/EC

Note

* Pb containing terminations are not RoHS compliant, exemptions may apply

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 85 °C (to + 125 °C with voltage derating)

Capacitance Tolerance: At 120 Hz, + 25 °C. ± 20 % standard. ± 10 % available as special.

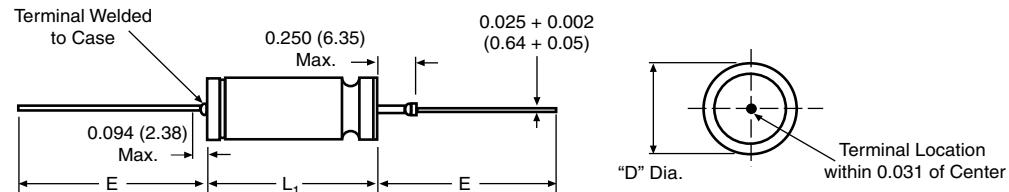

DC Leakage Current (DCL Max.): At + 25 °C and above: Leakage current shall not exceed the values listed in the Standard Ratings Tables.

Life Test: Capacitors are capable of withstanding a 2000 h life test at a temperature of + 85 °C at the applicable rated DC working voltage.

Wet Tantalum HI TMP® Capacitors Tantalum-Case with Glass-to-Tantalum Hermetic Seal for - 55 °C to + 200 °C Operation

FEATURES

Vishay 134D HI TMP® represents a major breakthrough in wet tantalum capacitor technology for high temperature (+ 200 °C) applications such as that seen in the petroleum exploration industry. Its unique design provides for the highest capacitance per unit volume. The design facilitates a doubling of capacitance when compared with conventional wet tantalum products.

The 134D is housed in an all tantalum, hermetically sealed case and is manufactured to withstand high stress and hazardous environments.

- Terminations: Standard tin/lead (SnPb)
- 100 % tin (RoHS compliant) available
- Compliant to RoHS Directive 2002/95/EC

Note

* Pb containing terminations are not RoHS compliant, exemptions may apply

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 85 °C (to + 200 °C with voltage derating)

Capacitance Tolerance: At 120 Hz, + 25 °C; ± 20 % standard; ± 10 %

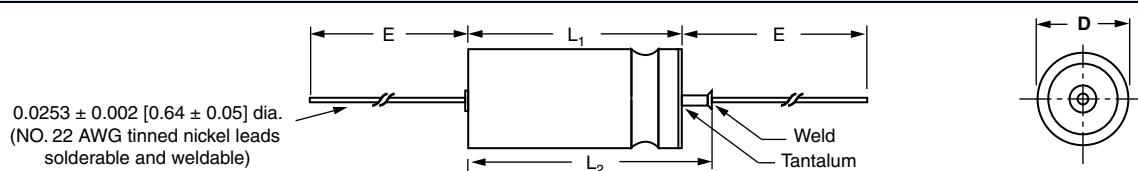

DC Leakage Current (DCL Max.): At + 25 °C and above: Leakage current shall not exceed the values listed in the Standard Ratings tables.

Life Test: Capacitors are capable of withstanding a 500 h life test at a temperature of + 200 °C at the applicable derated DC working voltage.

ORDERING INFORMATION						
134D	227	X0	100	K	6	E3
TYPE	CAPACITANCE	CAPACITANCE TOLERANCE	DC VOLTAGE RATING AT + 85 °C	CASE CODE	STYLE NUMBER	RoHS COMPLIANT
	This is expressed in picofarads. The first two digits are the significant figures. The third is the number of zeros to follow	X0 = ± 20 % X9 = ± 10 %	This is expressed in volts. To complete the three-digit block, zeros precede the voltage rating. A decimal point is indicated by an "R" (6R3 = 6.3 V)	See Ratings and Case Codes table	High temperature 8 = No outer insulating sleeve 6 = High temperature film insulation (above + 125 °C)	E3 = 100 % tin termination (RoHS compliant design) Blank = SnPb termination (standard design)

Note

- Packaging: The use of formed plastic trays for packaging this type of axial lead component is standard. Tape and reel is not recommended due to the unit weight.

Note

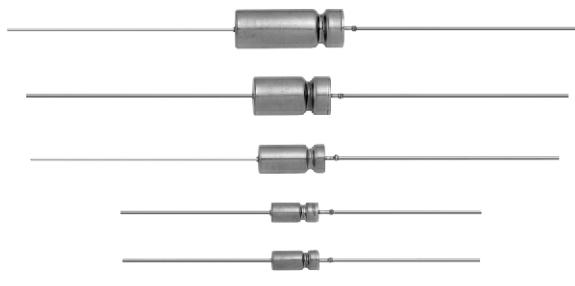

⁽¹⁾ For insulated parts, add 0.015 inches [0.38] to the diameter. The insulation shall lap over the ends of the capacitor body.

Wet Tantalum Capacitors, Extended Capacitance, Tantalum-Case with Glass-to-Tantalum Hermetic Seal for - 55 °C to + 125 °C

FEATURES

- Enhanced performance, high reliability design
- Terminations: Standard tin/lead (SnPb), 100 % tin available
- Model T16 tantalum-case electrolytic capacitors provide all the advantages of Vishay's SuperTan® series devices, while offering improved reverse voltage and vibration capability
- Increased thermal shock capability of 300 cycles
- Mounting: Through-hole axial
- Designed for the avionics and aerospace applications
- Compliant to RoHS Directive 2002/95/EC

RoHS*
COMPLIANT

PERFORMANCE CHARACTERISTICS

Refer to: Typical Performance Characteristics

Operating Temperature: - 55 °C to + 85 °C
(To + 125 °C with voltage derating)

Capacitance Tolerance: ± 10 %, ± 20 % standard

DC Leakage Current (DCL Max.): At + 25 °C and above:
Leakage current shall not exceed the values listed in the Standard Ratings table.

ORDERING INFORMATION								
T16	D	220	M	100	E	Z	S	S
MODEL	CASE CODE	CAPACITANCE	CAPACITANCE TOLERANCE	DC VOLTAGE RATING AT + 85 °C	TERMINATION AND PACKAGING	RELIABILITY LEVEL	INSULATING SLEEVE	ESR
See Ratings and Case Codes Table	This is expressed in picofarads. The first two digits are the significant figures. The third is the number of zeros to follow	K = ± 10 % M = ± 20 %	This is expressed in volts. To complete the three-digit block, zeros precede the voltage rating	E = Tin/lead, bulk, standard C = 100 % tin, bulk	Z = Non-ER	S = Sleeved U = Unsleeved	S = Std.	

Note

Packaging: The use of formed plastic trays for packing bulk components is standard.

TYPICAL PERFORMANCE CHARACTERISTICS OF T16 CAPACITORS

ELECTRICAL CHARACTERISTICS

ITEM	PERFORMANCE CHARACTERISTICS
Operating Temperature Range	- 55 °C to + 85 °C (to + 125 °C with voltage derating)
Capacitor Tolerance	± 20 %, ± 10 % at 120 Hz, at + 25 °C
Capacitor Change by Temperature	Limit per Standard Ratings table
ESR	Limit per Standard Ratings table, at + 25 °C, 100 kHz
Impedance	Limit per Standard Ratings table, at - 55 °C, 120 Hz
DCL (Leakage Current)	Limit per Standard Ratings table
AC Ripple Current	Limit per Standard Ratings table, at + 85 °C and 40 kHz
Reverse Voltage	Surge voltage shall be in accordance with MIL-PRF-39006, paragraphs 3.23 and 4.8.19, except DC potential will be maximum of 1.5 V.
Surge Voltage	Reverse voltage shall be in accordance with MIL-PRF-39006 and Table II of DSCC93026. The DC rated surge voltage is the maximum voltage to which the capacitors can be subjected under any conditions including transients and peak ripple at the highest line voltage. The DC surge voltage is 115 % of rated DC voltage.

PERFORMANCE CHARACTERISTICS

ITEM	PERFORMANCE CHARACTERISTICS
Life Testing	Capacitors shall be capable of withstanding a 2000 h life test at a temperature + 85 °C at rated voltage, or a 2000 h life test at 125 °C test at derated voltage. After the test, the capacitors shall meet the following requirements: a) DC leakage at 85 °C and 125 °C shall not exceed 125 % of the specified value b) DC leakage at 25 °C shall not exceed the specified value c) Capacitance shall be within + 10 %, - 20 % of initial value d) ESR shall not exceed 200 % of the specified value

ENVIRONMENTAL CHARACTERISTICS		
ITEM	CONDITION	COMMENTS
Seal	MIL-PRF-39006	When the capacitors are tested as specified in MIL-PRF-39006, there shall be no evidence of leakage
Moisture Resistance	MIL-PRF-39006	Moisture resistance shall be in accordance with MIL-PRF-39006. Number of cycles: 10 continuous cycles
Barometric Pressure (Reduced)	MIL-STD-202, Method 105 Condition F	Altitude 150 000 feet

MECHANICAL CHARACTERISTICS		
ITEM	CONDITION	COMMENTS
Shock (Specified Pulse)	MIL-STD-202, Method 213, Condition I (100 g)	The capacitors shall meet the requirements of MIL-PRF-39006
Vibration, High Frequency	MIL-STD-202, Method 204, Condition D (20 g peak)	The capacitors shall meet the requirements of MIL-PRF-39006
Random Vibration	MIL-STD-202, Method 214, Condition II-G (Overall RMS 27.78 g)	The capacitors shall meet the requirements of MIL-PRF-39006
Thermal Shock	MIL-STD-202, Method 107, Condition A	Thermal shock shall be in accordance with MIL-PRF-39006 when tested for 300 cycles
Solderability	MIL-STD-202, Method 208, ANSI/J-STD-002, Test A	Solderability shall be in accordance with MIL-PRF-39006
Terminal Strength	MIL-STD-202, Method 211	Terminal strength shall be in accordance with MIL-PRF-39006
Resistance to Solder Heat	MIL-STD-202, Method 210, Condition C	The capacitors shall meet the requirements of MIL-PRF-39006
Terminals	MIL-STD-1276	Terminals shall be as specified in MIL-STD-1276. The length and diameter of the terminals shall be as specified in Dimensions table. All terminals shall be permanently secured internally and externally, as applicable. All external joints shall be welded.
Marking	MIL-STD-1285	Marking of capacitors conforms to Method I of MIL-STD-1285 and include capacitance (in μ F), capacitance tolerance letter, rated voltage, date code, lot symbol and Vishay trademark

Wet Tantalum Capacitors Cylindrical Body, Hermetically Sealed

FEATURES

- High temperature
- High voltage
- High capacitance
- Withstands high frequency vibration to 2000 Hz
- Hermetically sealed
- Long shelf life
- DSCC drawings 04032 and 04033

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 175 °C with proper derating

Voltage Range: 8 V_{DC} to 630 V_{DC} at 85 °C

Reverse Voltage: None

Capacitance Range: 2 µF to 2200 µF

Tolerance Range:

- 15 % to + 50 % (standard for XTK, XTM, XTV)
- 15 % to + 75 % (standard for XTH, XTL)
- ± 20 % (special order)

XTH, XTL AND XTV MOUNTING METHODS

DETAIL A	DETAIL B
<p>Turret terminal detail dimensions (positive lead connections)</p> <p>For configurations A, B, C, D, E, F, G, H, J and M</p>	<p>Configuration L only</p> <p>Nut nearly flush with ends of threads</p> <p>For configurations K and L</p>
DETAIL C	DETAIL D
<p>Tapped 1/4-20UNC-2B hole or internal tooth lockwasher and hex nut</p> <p>Panel</p> <p>For configurations E and H</p>	<p>Panel</p> <p>0.625 DIA. counterbore x 0.100.090 deep (for head of weld screw)</p> <p>Use 8-32 x 0.246 long helical for non-ferrous metal panel</p> <p>0.375 MIN.</p> <p>Not recommended for non-metal panels</p> <p>For configurations F and J</p>
DETAIL E	
<p>Secure to 100 in. lbs. torque</p> <p>Configuration L only</p> <p>Panel must be rigidly fixed</p> <p>0.090</p> <p>0.375 MIN. recommended thickness</p> <p>For configurations K and L</p>	<p>0.511</p> <p>0.505</p> <p>0.390</p> <p>0.385</p> <p>Configuration L only</p> <p>May use rectangular hole of similar dimensions</p>

Note

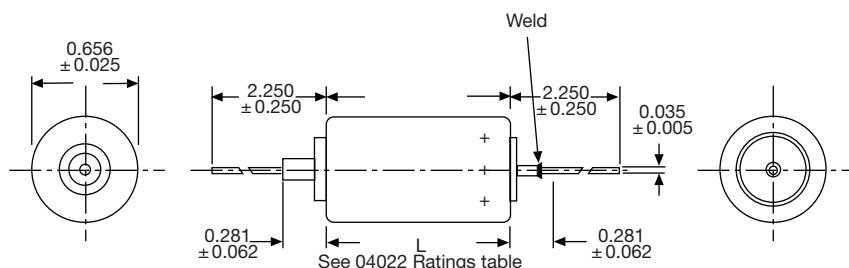

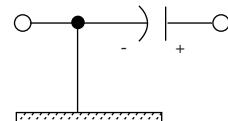

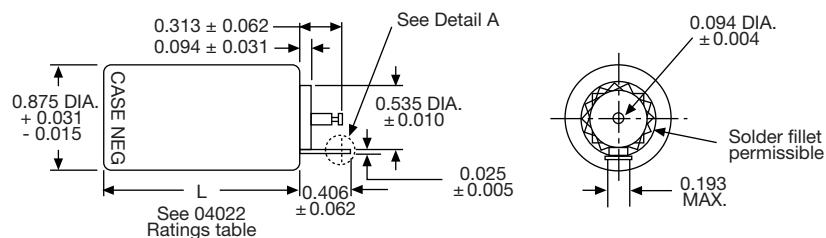

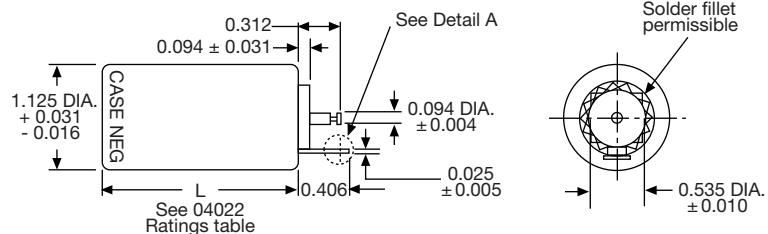

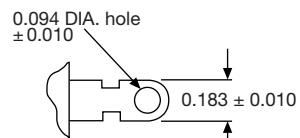

- Standard mounting nut provided is plated steel. Stainless steel nut can be obtained by adding "/STN" suffix to part number.

HE3	114
-----------	-----

High Energy

Wet Tantalum Capacitors, Tantalum-Case with Glass-to-Tantalum Hermetic Seal for - 55 °C to + 125 °C Operation

FEATURES

Vishay HE3 represents a major breakthrough in wet tantalum capacitor technology for high-energy applications. The unique case design provides for the highest capacitance per unit volume. The HE3 also utilizes the proven hybrid technology of our SuperTan® product.

The HE3 is housed in an all tantalum, hermetically sealed case, and is manufactured to withstand high stress and hazardous environments. The design provides a unique double seal for improved reliability and performance.

- Compliant to RoHS Directive 2002/95/EC

Note

* Pb containing terminations are not RoHS compliant, exemptions may apply

PERFORMANCE CHARACTERISTICS

Operating Temperature:

- 55 °C to + 85 °C (to + 125 °C with voltage derating)

Capacitance Tolerance:

At 120 Hz, + 25 °C ± 20 % standard

± 10 % available as special

Contact marketing for availability of 10 % tolerance

DC Leakage Current (DCL Max.):

At + 25 °C: Leakage current shall not exceed the values listed in the Standard Ratings tables.

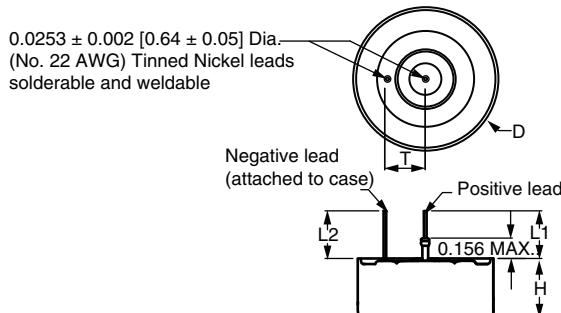

Life Test:

Capacitors are capable of withstanding a 1000 h life test at a temperature of + 85 °C at the applicable rated DC working voltage.

ORDERING INFORMATION								
HE3	C	543	K	025	B	Z	S	S
TYPE	CASE CODE	CAPACITANCE	CAPACITANCE TOLERANCE	DC VOLTAGE RATING AT + 85 °C	TERMINATION AND PACKAGING	RELIABILITY LEVEL	TEMPERATURE	ESR
See Ratings and Case Codes table	This is expressed in microfarads. The first two digits are the significant figures. The third is the number of zeros to follow.	K = 10 % ⁽¹⁾ M = 20 %		This is expressed in V. To complete the three-digit block, zeros precede the voltage rating. A decimal point is indicated by an "R" (6R3 = 6.3 V)	A = 100 % tin (RoHS compliant) B = Tin/lead and bulk	Z = Non-ER	S = Standard (- 55 °C to + 85 °C)	S = Standard

Note

Note

- Part number definitions:
 - (1) Standard capacitance tolerance is 20 % or "M". Contact marketing for availability of 10 % or "K".
 - (2) Standard termination is "B" or tin/lead. RoHS compliant or 100 % tin is available as "A".
 - (3) Standard reliability is "Z" or non-established reliability.
 - (4) Standard temperature range is "S" or - 55 °C to + 125 °C.
 - (5) Standard ESR is "S".

PERFORMANCE CHARACTERISTICS OF HIGH ENERGY CAPACITORS

ELECTRICAL PERFORMANCE CHARACTERISTICS	
ITEM	PERFORMANCE CHARACTERISTICS
Operating temperature range	- 55 °C to + 85 °C (to + 125 °C with voltage derating)
Capacitor tolerance	± 20 % ± 10 % at 120 Hz
ESR	Limits per Standard Ratings table
DC leakage current (DCL max.)	At 25 °C the leakage current shall not exceed values listed in the Standard Rating table.
Reverse voltage	No continuous reverse voltage permitted
Surge voltage	The test shall be at 1000 cycles at 110 % of rated voltage at 85 °C. A cycle consists of a one and one half (1.5) min charge and a four and one half (4.5) min discharge through 100 Ω resistor.
Life test at + 85 °C	1000 h at + 85 °C

ENVIRONMENTAL PERFORMANCE CHARACTERISTICS		
ITEM	TEST AND CONDITIONS	COMMENTS
Hermeticity	MIL-STD-202, method 112 C/IIla	The capacitor shall be hermetically sealed such that the case does not leak electrolyte or vent any gas when exposed to a vacuum.
Moisture resistance	MIL-STD-202, method 106	
Altitude	MIL-STD-202, method 105 C, test condition D	100 000 feet test

MECHANICAL PERFORMANCE CHARACTERISTICS		
ITEM	TEST AND CONDITIONS	COMMENTS
Thermal shock	MIL-STD-202, method 107 G	
Shock	MIL-STD-202, method 213 B test condition G	11 ms, 50 g
Vibration - high frequency	MIL-STD-202, method 204 D test condition D	12 sweeps/axis, 20 g peak
Vibration - random	MIL-STD-202, method 214 A test condition I, letter D	1.5 h/axis, 12 g
Resistance to solder heat	MIL-STD-202, method 210 F	The capacitor must withstand solder dipping of the terminals at 260 °C for 10 s. The capacitor must not be visibly damaged and the electrical characteristics must not be affected.
Solderability	ANSI J-STD-002	
Terminal strength	MIL-STD-202, method 211 A	The capacitor terminals must withstand a 5 pound pull test for 5 s to 10 s. The capacitor must not be visibly damaged and the electrical characteristics must not be affected.
Part markings	MIL-STD-202, method 215 J	The capacitor shall be permanently and legibly marked on the circumference of the case. The markings shall be resistant to solvents.
Weight (mass)		See dimensions table

HE3 MOUNTING OPTIONS

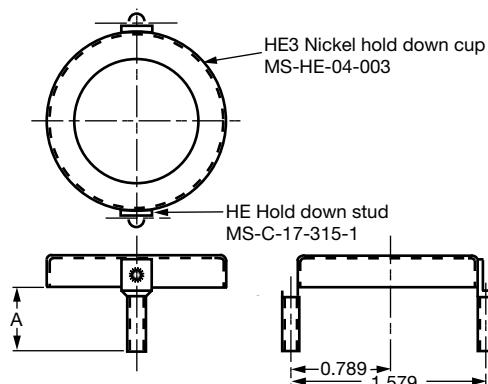

The HE3 capacitor can be mounted with many commercially available methods. Vishay offers the optional mounting hardware outlined below.

THROUGH-HOLE

If mounted through-hole, the glass-to-metal seal must be protected from potential mounting and application stress. The HE3 can be mounted termination down through the HE3SPC001 spacer into the PCB. The proper size bracket HE3BKT00* can then be utilized to hold the HE3 rigidly to the PCB.

TERMINATIONS UP

If mounted with terminations facing up for attachment to wiring, the spacer is not needed. The HE3 can be reverse with terminations facing upward through the center of the HE3BKT00* bracket, which is then mounted through the PCB.

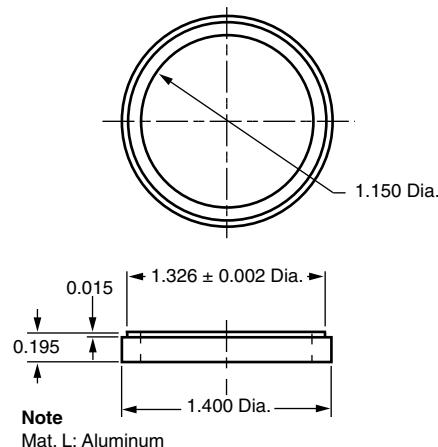

Notes

- Spot weld, 2 places
- Mounting bolt:
 1. Material - Stainless steel
 2. Thread - 6-32 NC-2A

PART NUMBER ⁽¹⁾	STUD	A ± 0.010
HE3BKT001	HE3A	0.391
HE3BKT002	HE3B	0.518
HE3BKT003	HE3C	0.605
HE3BKT004	HE3A W/spacer	0.572
HE3BKT005	HE3B W/spacer	0.699
HE3BKT006	HE3C W/spacer	0.831

Note

⁽¹⁾ The part numbers shown are for ordering the mounting bracket and/or spacer. The HE3 capacitor must be ordered separately using the correct part number as outlined in ORDERING INFORMATION and in the STANDARD RATINGS table.

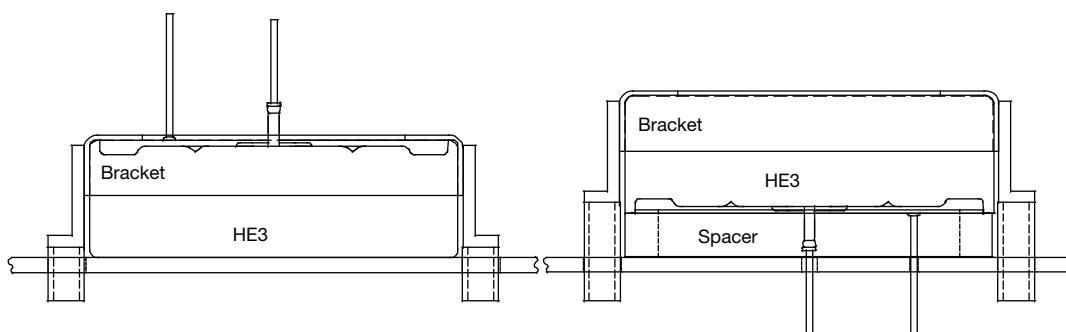

Note

Wet Tantalum Capacitors Wet Sintered Anode TANTALEX® Components TANTAPAK® Capacitor Assemblies

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 125 °C.

Capacitance Tolerance: At 120 Hz, + 25 °C. ± 20 % standard. ± 10 % available.

DC Leakage Current (DCL Max.):

At + 25 °C: Leakage current shall not exceed the values listed in the Standard Ratings Tables.

FEATURES

TANTAPAK® Wet Sintered Anode capacitor assemblies are widely used in filter, coupling, bypass and time-delay circuits in computers, missiles, airborne equipment, radar and fire control systems.

TANTAPAK® capacitor assemblies are available in 3 standard case styles and 13 case codes. Type 200D units are constructed with the negative terminal connected to the case; they are available only in the "A" case, in five case codes. Model 202D capacitors are the commercial equivalent of Transistor Style RW, Mallory-NACC Style TL and are designed to meet MIL-DTL-3965 and DSCC DWG 04021.

Life Test: Capacitors shall withstand 2000 hours at a temperature of + 85 °C or + 125 °C at the rated DC working voltage.

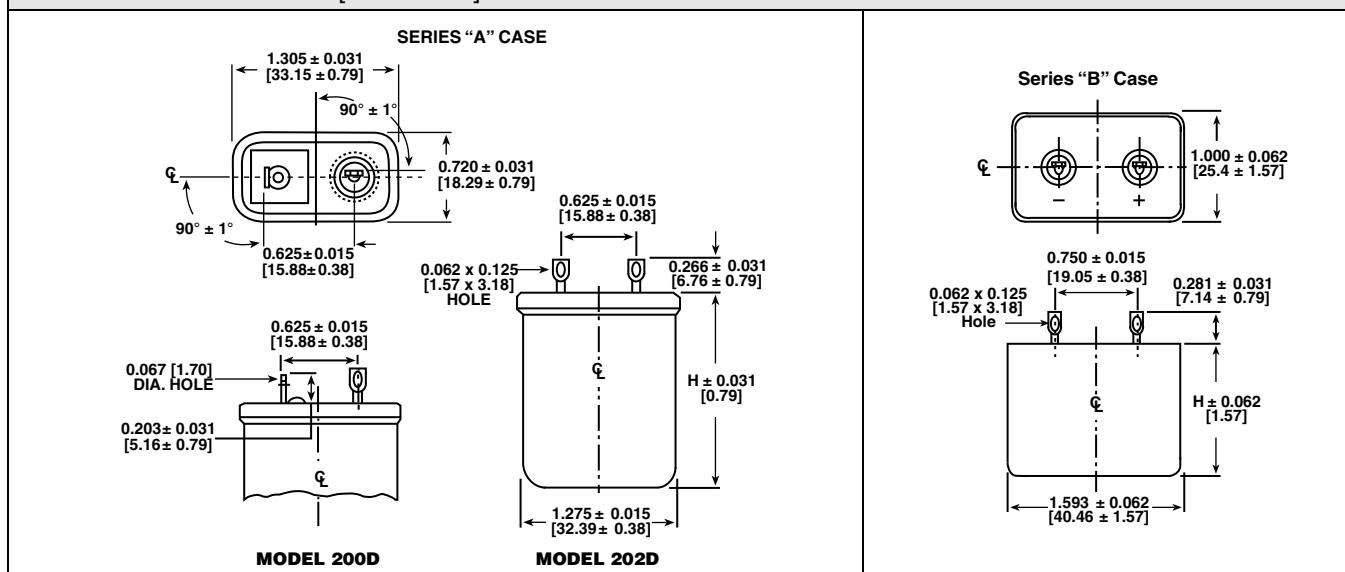

Following the life test:

1. DCL shall not exceed the original requirement.
2. ESR shall not be more than 130 % of the initial requirement.
3. Capacitance shall not change more than ± 25 %.

ORDERING INFORMATION

202D MODEL	318 CAPACITANCE	X0 CAPACITANCE TOLERANCE	006 DC VOLTAGE RATING AT + 85 °C	A1 CASE CODE
200D = Negative terminal connected to case (Available only in 'A' Cases)	This is expressed in picofarads. The first two digits are the significant figures. The third is the number of zeros to follow	X0 = ± 20 % X9 = ± 10 %	This is expressed in volts. To complete the three-digit block, zeros precede the voltage rating	See Dimensional Configurations
202D = Both terminals insulated from case

Note

(1) Vishay is no longer qualified to provide military CL55 type which has been discontinued.
It has been replaced by an equivalent product built to DSCC Drawing 04021

Type 211D Wet Tantalum Capacitor Array with Tantalum Cased Tantalum Internal Components for - 55 °C to + 125 °C Operation

FEATURES

Vishay 211D series was designed as an upgrade to the older and mature 200D and 202D Tantalphak® Capacitor assemblies. The 211D is constructed using tantalum capacitors, similar to the Vishay 135D series or the MIL-PRF-39006/22 or /25 styles. This enables the 211D to exhibit the improved performance characteristics of the tantalum-cased capacitors. Capable of withstanding 3.0 V reverse. The 211D has applicability in new designs when used for energy storage, filtering and similar functions.

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 125 °C

Capacitance Tolerance: At 120 Hz, + 25 °C, ± 20 %

Standard: ± 10 % available

DC Leakage Current (DCL maximum):

At + 25 °C: Leakage current shall not exceed the values listed in the Standard Ratings table.

Life Test: Capacitors shall withstand 2000 h at a temperature of + 85 °C or + 125 °C at the rated DC working voltage. Following the life test:

1. DCL shall not exceed the original requirement
2. ESR shall not exceed the original requirement
3. Capacitance shall not change more than ± 10 %

ORDERING INFORMATION

211D MODEL	228 CAPACITANCE	X CAPACITANCE TOLERANCE	030 DC VOLTAGE RATING AT + 85 °C	A5 CASE CODE
	This is expressed in picofarads. The first two digits are significant figures. The third is the number of zeros.	X0 = ± 20 % X9 = ± 10 %	This is expressed in volts. To complete the three digit block, zeros precede the voltage rating. A decimal point is indicated by an "R" (6R3 = 6.3 V).	See dimensional configurations

Note

- Other ratings are available. Contact factory with your specific requirements.

Tantalum-Cased-Tantalum Sintered Anode TANTALEX® Capacitors for Operation to + 125 °C

FEATURES

- High ripple current capability
- Extended temperature range
- Very low impedances over wide frequency ranges
- Long history of reliable operation

Type 285D capacitors are commercial replacements for Military Style M39006/01, 02, 03, 04, 16, 17 and are designed to meet the performance requirements of Military Specification MIL-C-39006. Internal cells are M39006/22 and M39006/25.

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 85 °C
(To + 125 °C with voltage derating)

Capacitance Tolerance: At 120 Hz, + 25 °C. ± 20 % standard, ± 10 %, ± 5 % available as special

DC Leakage Current (DCL Max.):

At + 25 °C, + 85 °C, + 125 °C: Leakage current shall not exceed the values listed in the Standard Ratings Tables

Life Test: Capacitors are capable of withstanding a 2000 h life test at a temperature of + 85 °C or + 125 °C at the applicable DC working voltage.

Following the life test:

1. DCL shall not exceed the initial requirement.
2. Dissipation factor shall meet the initial requirement.
3. Change in capacitance shall not exceed 10 % from the initial measurement. For capacitors with voltage ratings of 15 V_{DC} and below, change in capacitance shall not exceed + 10 %, - 25 % from the initial measurement.

Notes

- Part number definitions:

(1) Capacitance tolerance:

X0 = 20 %,

X9 = 10 %

(2) Style number or case insulation:

0 = No insulation,

2 = Polyester film insulation

⁽¹⁾ Ripple current is at 40 kHz and is governed by the ripple current multipliers associated with MIL-PRF-39006/22 and MIL-PRF-39006/25. All capacitance, DF and Z measurements are based on 120 Hz frequency and equivalent series circuit measuring equipment settings. Other ratings are available. Contact factory with inquiry.

Wet Tantalum Capacitor, Assembly or Array, All-Tantalum Case, - 55 °C to 125 °C Operation

INTRODUCTION

The module series of capacitors comprise five individual button units which are connected in parallel to give a very high capacitance.

The epoxy resin encapsulation within an epoxy resin box, measuring approx. 50 mm x 50 mm x 10 mm gives an extremely robust construction which lends itself to bank mounting.

The MC module incorporated CA2 or CE2 style buttons. These button capacitor styles are of all-tantalum construction using a tantalum anode and tantalum cathode with a non-solid electrolyte. This well-proven construction with its highly efficient seal combined with the resin encapsulation gives an extremely robust module of long life and high reliability under military and avionic environments with the capability of withstanding 3 V in reverse, and of handling high levels of ripple current.

APPLICATIONS

These units are designed for use in general military, space avionics and professional applications. For example: Power supply smoothing, filter network, timer functions.

WEIGHT

The approximate weight of a module is 130 g.

FEATURES

- All-Tantalum electrodes eliminate silver migration
- Withstands high ripple current
- Long life reliability
- Reverse voltage capability
- Stackable
- Mounting: Solder tag

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 125 °C

Voltage Range: 6 V_{DC} to 125 V_{DC}

Capacitance Range: 235 µF to 9100 µF

SPECIFICATIONS

Environmental classification: 55/125/56

Vibration: 10 Hz to 2000 Hz, 0.75 mm or 99 m/s², 30 h

Bump: 320 m/s², 4000 bumps

Shock: -

Acceleration: -

Low air pressure: 1 kPa

REVERSE VOLTAGE CAPABILITY

Module units are polar capacitors which allow the application of reverse potentials not exceeding 3 V at temperatures up to 125 °C.

SURGE VOLTAGE

The surge voltage capability is 115 % of the voltage rating at the relevant temperature.

TEMPERATURE RANGE

The capacitor is designed for operation between - 55 °C and + 125 °C, with linear voltage derating above + 85 °C to 66 % of the rated voltage at + 125 °C.

CAPACITANCE TOLERANCE

The standard capacitance tolerance is ± 20 % although special tolerances are available by arrangement.

APPLICATION INFORMATION

Capacitors may be operated at less than the rated voltage, resulting in significantly reduced leakage current values.

In timing circuits, or other applications where the device is subjected only to a DC voltage, the ballistic or DC capacitance will be somewhat larger than measured at 50 Hz.

The parametric information must necessarily be brief, although additional comprehensive data is available on request, and the tests tailored to customers' requirements can be made.

RELIABILITY

All capacitors are subjected to burn-in. This is to remove infant mortalities and ensure reliability. The capacitor lifetime is enhanced when the unit is subjected to a reduced ripple current, a low ambient temperature, and is externally cooled. The use of a heat sink is recommended.

STACKING

The units are suitable for stacking by use of through bolts. It is strongly recommended that a metal heat sink is used between each unit in order to eliminate the possibility of hot spots.

ESTABLISHED FAILURE RATE

The MT range incorporates 735D capacitors which are structurally similar to and subjected to the same processes as our 135D and MIL-PRF-39006 range which is to an established failure rate of level R, 0.01 % per 1000 h at a 60 % confidence level. The CECC system of testing does not readily yield data to prove these levels, but in-house testing supports this figure.

Although failure rates derived from life tests are a useful guide, in practice capacitors rarely see conditions of a steady DC voltage and temperature. The construction of the MT module gives an ability to handle the high ripple currents at high frequencies, reverse voltages up to 3 V, and extremes of temperature likely to be encountered in modern circuitry.

ALTERNATIVE CONSTRUCTION

Alternative constructions based on the module range with differing terminal configurations and capacitor combinations including series connected units are available.

Wet Tantalum Capacitor, Assembly or Array, All-Tantalum Case, - 55 °C to + 125 °C Operation

INTRODUCTION

By use of the latest techniques of manufacture, Vishay is able to offer a new range of modules giving a size and weight advantage over the well proven MC range while still retaining a very high CV rating.

The MT2 series is an epoxy resin encapsulation of hermetically sealed units to give a robust construction of long life and high reliability under military and avionic environments.

In common with all Castanet capacitors of the "all-tantalum" construction they are capable of withstanding 3 V in reverse, and of handling high levels of ripple current.

The modules incorporate parallel connected 735D series, tubular "all-tantalum" construction capacitors already fully tested to the requirements of BS CECC 30 202 001.

Mounting is by bolting through two 3 mm clearance holes, and the units are stackable.

Metal heatsinks between the modules are recommended if the units are stacked.

APPLICATIONS

The MT2 is ideal for use in military and professional applications, including power supply "smoothing", filter networks, and timer functions.

WEIGHT

The approximate weight of a module is 65 g.

FEATURES

- High volumetric efficiency
- Withstands high ripple current
- Long life reliability
- Reverse voltage capability
- Stackable
- No silver migration problems
- Mounting: Solder tag

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 125 °C

Voltage Range: 6 V_{DC} to 125 V_{DC}

Capacitance Range: 220 µF to 6000 µF

SPECIFICATIONS

Environmental classification: -

Vibration: -

Bump: -

Shock: -

Acceleration: -

Low air pressure: -

APPROVALS

These capacitors are available released to:

- BS CECC 30 202 009

REVERSE VOLTAGE CAPABILITY

The MT2 series employ tantalum cathodes which allow the continuous application of reverse potentials not exceeding 3 V over the whole temperature range.

SURGE VOLTAGE

The surge voltage capability is 115 % of the voltage rating at the relevant temperature.

TEMPERATURE RANGE

The capacitor is designed for operation between - 55 °C and + 125 °C, with linear voltage derating above + 85 °C to 66 % of the rated voltage at + 125 °C.

CAPACITANCE TOLERANCE

The standard capacitance tolerance is ± 20 % although special tolerances are available by arrangement.

APPLICATION INFORMATION

Capacitors may be operated at less than the rated voltage, resulting in significantly reduced leakage current values.

In timing circuits, or other applications where the device is subjected only to a DC voltage, the ballistic or DC capacitance will be somewhat larger than measured at 50 Hz.

The parametric information must necessarily be brief, although additional comprehensive data is available on request, and the tests tailored to customers' requirements can be made.

RELIABILITY

All capacitors are subjected to burn-in. This is to remove infant mortalities and ensure reliability. The capacitor lifetime is enhanced when the unit is subjected to a reduced ripple current, a low ambient temperature, and is externally cooled. The use of a heat sink is recommended.

STACKING

The units are suitable for stacking by use of through bolts. It is strongly recommended that a metal heat sink is used between each unit in order to eliminate the possibility of hot spots.

ESTABLISHED FAILURE RATE

The MT range incorporates 735D capacitors which are structurally similar to and subjected to the same processes as our 135D and MIL-PRF-39006 range which is to an established failure rate of level R, 0.01 % per 1000 h at a 60 % confidence level. The CECC system of testing does not readily yield data to prove these levels, but in-house testing supports this figure.

Although failure rates derived from life tests are a useful guide, in practice capacitors rarely see conditions of a steady DC voltage and temperature. The construction of the MT module gives an ability to handle the high ripple currents at high frequencies, reverse voltages up to 3 V, and extremes of temperature likely to be encountered in modern circuitry.

ALTERNATIVE CONSTRUCTION

Alternative constructions based on the module range with differing terminal configurations and capacitor combinations including series connected units are available.

Wet Tantalum Capacitor, Button, All-Tantalum Case, - 55 °C to + 125 °C Operation

INTRODUCTION

This conveniently-packaged polar button unit employs a non-solid electrolyte, and has a sintered tantalum anode. The anode is produced from a high capacitance powder resulting in a capacitor of small size and large CV product.

The cathode is also of tantalum and overcomes the restrictions of a silver cathode system in allowing a high ripple current rating and application of a 3 V reverse potential. This all-tantalum construction results in a non-catastrophic wear-out mechanism.

The seal is a high efficient system comprising a PTFE gasket clamped between coined plates of tantalum by a work-hardened nickel ring. This type of seal, common to all button styles, is largely responsible for their long life and high reliability and severe military environments.

The CA2 series ranges are available in several termination options. These include a mounting stud and pins for circuit mounting.

APPLICATIONS

The CA2 series are designed for use in general military and professional applications. For example: Power supply "smoothing" filter networks, switching, by-pass, timer functions and where reverse potentials occur.

WEIGHT

The CA2 style with a stud termination weighs approximately 18.1 g, including the nut. The CA2 styles, which has a printed circuit board mounting, weighs approximately 17.3 g.

FEATURES

- All-Tantalum electrodes eliminate silver migration
- Withstands high ripple current
- Long life reliability
- Reverse voltage capability
- Instant use after long storage
- Mounting: Through-hole

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 125 °C

Voltage Range: 6 V_{DC} to 125 V_{DC}

Capacitance Range: 47 µF to 1800 µF

SPECIFICATIONS

Environmental classification: 55/125/56

Vibration: 10 Hz to 2000 Hz, 0.75 mm or 98 m/s², 15 h

Bump: 390 m/s², 4000 bumps

Shock: 981 m/s²

Acceleration: 981 m/s²

Low air pressure: 1 kPa

APPROVALS

These capacitors are available released to:

- BS CECC 30 202 002

RIPPLE CURRENT CAPABILITY

The maximum allowable ripple current is 1 A_{RMS} up to 85 °C and 750 mA_{RMS} to 125 °C. These values apply under normal cooling conditions and are irrespective of frequency or waveform. The algebraic sum of the AC peak and DC voltages must not exceed the forward or reverse voltage ratings at the relevant temperature.

At certain frequency/temperature/DC voltage combinations higher levels of ripple current may be used. The applications department should be contacted before the above levels are exceeded.

REVERSE VOLTAGE CAPABILITY

The CA2 series employ tantalum cathodes which allow the continuous application of reverse potentials not exceeding 3 V over the whole temperature range.

SURGE VOLTAGE

The surge voltage capability is 115 % of the voltage rating at the relevant temperature.

TEMPERATURE RANGE

The capacitor is designed for operation between - 55 °C and + 125 °C, with linear voltage derating above + 85 °C to 66 % of the rated voltage at + 125 °C.

CAPACITANCE TOLERANCE

The standard capacitance tolerance is ± 20 % although special tolerances are available by arrangement.

APPLICATION INFORMATION

Capacitors may be operated at less than the rated voltage, resulting in significantly reduced leakage current values.

In timing circuits, or other applications where the device is subjected only to a DC voltage, the ballistic or DC capacitance will be somewhat larger than measured at 50 Hz.

The parametric information must necessarily be brief, although additional comprehensive data is available on request, and the tests tailored to customers' requirements can be made.

RELIABILITY

All capacitors are subjected to burn-in. This is to remove infant mortalities and ensure reliability. The capacitor lifetime is enhanced when the unit is subjected to a reduced ripple current, a low ambient temperature, and is externally cooled. The use of a heat sink is recommended.

ORDERING PROCEDURE

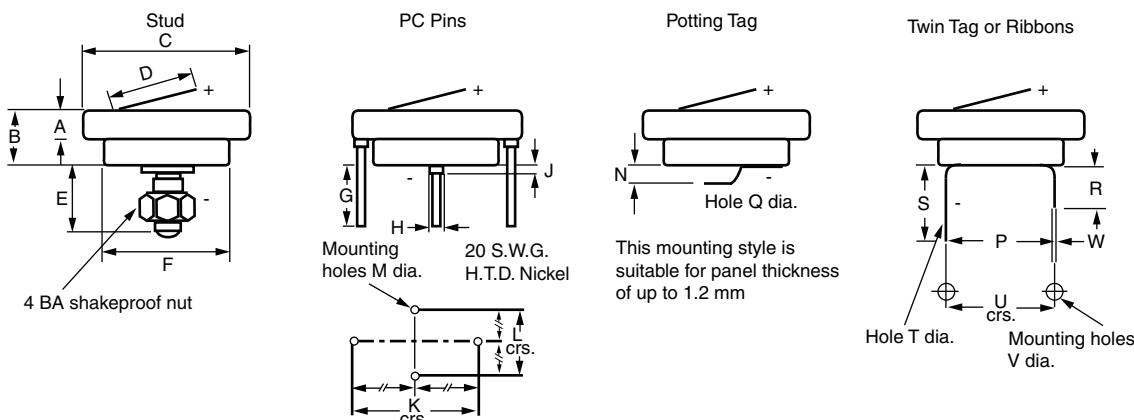

Example: CA2C (220 μ F, 50 V_{DC})

Vishay Part Number: CA2C227M050P

ORDERING INFORMATION					
CA2	C	227	M	100	A
MODEL	CASE CODE	CAPACITANCE	TOLERANCE	VOLTAGE	TERMINATION AND PACKAGING
See Ratings and Case Codes Table	This is expressed in picofarads. The first two digits are the significant figures. The third is the number of zeros to follow	M = 20 % (std) K = 10 % (special order)	This is expressed in volts. To complete the three-digit block, zeros precede the voltage rating. A decimal point is indicated by an "R" (6R3 = 6.3 V)		A = Stud B = PC mount pins C = Twin tag or ribbon D = Panel or potting tag Blank = Standard (tin/lead coating)

DIMENSIONS in millimeters

The CA2 series is comprised of two case sizes, differing in depth of cup only. The case size dimensions are shown in the table. Four mounting styles are available in both case sizes.

A	B max.	C	D	E	F	G	H	J	K crs.	L crs.	M dia.	N nom.	P	Q dia.	R	S	T dia.	U crs.	V dia.	W nom.
3.6	8.5 ⁽¹⁾	21.8	8.4 ⁽²⁾	8.4	16.2	8.4	1.8	0.8	20.3	10.2	1.1	2.4	13.1	1.0	7.5	10.7	1.6	13.0	3.5	0.30

Notes

- All dimensions are in mm, and are maximum unless otherwise stated

(1) For B case size, case height is 6.7 mm

(2) Width of anode tag 4.22 mm max.

Wet Tantalum Capacitor, Button, All-Tantalum Case, - 55 °C to + 125 °C Operation

INTRODUCTION

This conveniently-packaged polar button unit employs a non-solid electrolyte, and has a sintered tantalum anode. The anode is produced from a high capacitance powder resulting in a capacitor of small size and large CV product. The cathode is also of tantalum and overcomes the restrictions of a silver cathode system in allowing a high ripple current rating and application of a 3 V reverse potential. This all-tantalum construction results in a non-catastrophic wear-out mechanism.

The seal is a high efficient system comprising a PTFE gasket clamped between coined plates of tantalum by a work-hardened nickel ring. This type of seal, common to all button styles, is largely responsible for their long life and high reliability and severe military environments.

The CE2 series is an extension of the CA2 series with the anode produced from selected powder of very high capacitance giving a higher CV product.

The CE2 series ranges are available in several termination options. These include a mounting stud and pins for circuit mounting.

APPLICATIONS

The CE2 series are designed for use in general military and professional applications. For example: Power supply "smoothing" filter networks, switching, by-pass, timer functions and where reverse potentials occur.

WEIGHT

The CE2 style with a stud termination weighs approximately 18.1 g, including the nut. The CE2 styles, which has a printed circuit board mounting, weighs approximately 17.3 g.

FEATURES

- All-Tantalum electrodes eliminate silver migration
- Withstands high ripple current
- Long life reliability
- Reverse voltage capability
- Instant use after long storage
- Mounting: Through-hole

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 125 °C

Voltage Range: 6.3 V_{DC} to 125 V_{DC}

Capacitance Range: 82 µF to 1800 µF

SPECIFICATIONS

Environmental classification: 55/125/56

Vibration: 10 Hz to 2000 Hz, 0.75 mm or 98 m/s², 15 h

Bump: 390 m/s², 4000 bumps

Shock: 981 m/s²

Acceleration: 981 m/s²

Low air pressure: 1 kPa

APPROVALS

These capacitors are available released to:

- BS CECC 30 202 002

RIPPLE CURRENT CAPABILITY

The maximum allowable ripple current is 1 A_{RMS} up to 85 °C and 750 mA_{RMS} to 125 °C. These values apply under normal cooling conditions and are irrespective of frequency or waveform. The algebraic sum of the AC peak and DC voltages must not exceed the forward or reverse voltage ratings at the relevant temperature.

At certain frequency/temperature/DC voltage combinations higher levels of ripple current may be used. The applications department should be contacted before the above levels are exceeded.

REVERSE VOLTAGE CAPABILITY

The CE2 series employ tantalum cathodes which allow the continuous application of reverse potentials not exceeding 3 V over the whole temperature range.

SURGE VOLTAGE

The surge voltage capability is 115 % of the voltage rating at the relevant temperature.

TEMPERATURE RANGE

The capacitor is designed for operation between - 55 °C and + 125 °C, with linear voltage derating above + 85 °C to 66 % of the rated voltage at + 125 °C.

CAPACITANCE TOLERANCE

The standard capacitance tolerance is ± 20 % although special tolerances are available by arrangement.

APPLICATION INFORMATION

Capacitors may be operated at less than the rated voltage, resulting in significantly reduced leakage current values.

In timing circuits, or other applications where the device is subjected only to a DC voltage, the ballistic or DC capacitance will be somewhat larger than measured at 50 Hz.

The parametric information must necessarily be brief, although additional comprehensive data is available on request, and the tests tailored to customers' requirements can be made.

RELIABILITY

All capacitors are subjected to burn-in. This is to remove infant mortalities and ensure reliability. The capacitor lifetime is enhanced when the unit is subjected to a reduced ripple current, a low ambient temperature, and is externally cooled. The use of a heat sink is recommended.

ORDERING PROCEDURE

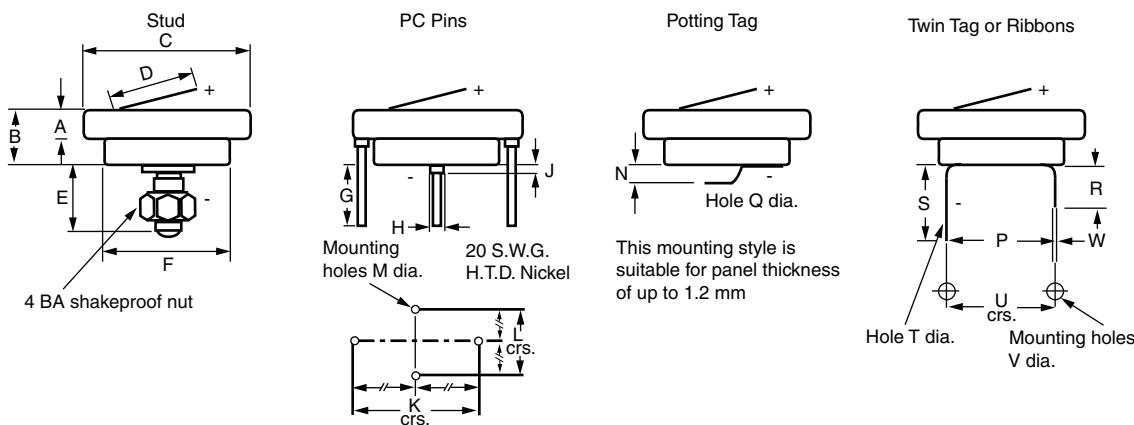

Example: CE2C (270 μ F, 40 V_{DC})

Vishay Part Number: CE2C277M040P

ORDERING INFORMATION					
CE2	C	227	M	100	A
MODEL	CASE CODE	CAPACITANCE	TOLERANCE	VOLTAGE	TERMINATION AND PACKAGING
See Ratings and Case Codes Table	This is expressed in picofarads. The first two digits are the significant figures. The third is the number of zeros to follow	M = 20 % (std) K = 10 % (special order)	This is expressed in volts. To complete the three-digit block, zeros precede the voltage rating. A decimal point is indicated by an "R" (6R3 = 6.3 V)	A = Stud B = PC mount pins C = Twin tag or ribbon D = Panel or potting tag	Blank = Standard (tin/lead coating)

DIMENSIONS in millimeters

The CE2 series is comprised of two case sizes, differing in depth of cup only. The case size dimensions are shown in the table. Four mounting styles are available in both case sizes.

A	B max.	C	D	E	F	G	H	J	K crs.	L crs.	M dia.	N nom.	P	Q dia.	R	S	T dia.	U crs.	V dia.	W nom.
3.6	8.5 ⁽¹⁾	21.8	8.4 ⁽²⁾	8.4	16.2	8.4	1.8	0.8	20.3	10.2	1.1	2.4	13.1	1.0	7.5	10.7	1.6	13.0	3.5	0.30

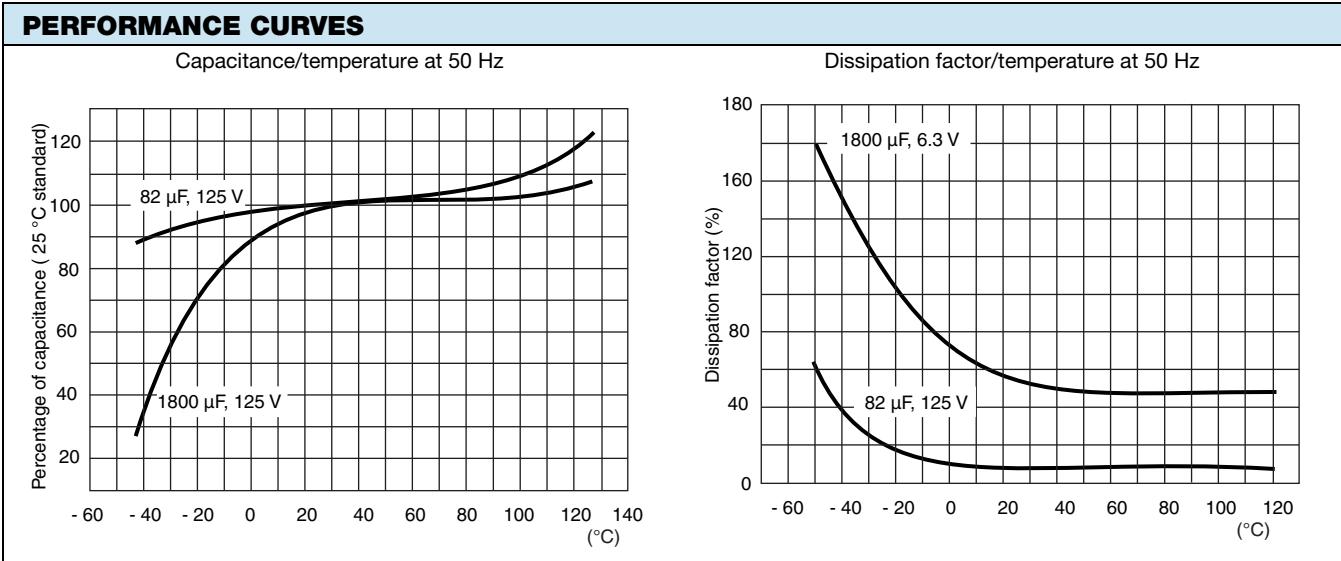

Notes

- (1) All dimensions are in mm, and are maximum unless otherwise stated
- (2) For B case size, case height is 6.7 mm
- (3) Width of anode tag 4.22 mm max.

Wet Tantalum Capacitor, Button, All-Tantalum Case, - 55 °C to + 150 °C Operation

INTRODUCTION

This conveniently-packaged polar button unit employs a non-solid electrolyte, and has a sintered tantalum anode. The anode is produced from a medium capacitance powder and the lower CV product allows a tighter specification of capacitance stability, dissipation factor and leakage current.

The cathode is also of tantalum, and overcomes the restrictions of a silver cathode system in allowing a high ripple current rating and application of a 3 V reverse potential.

Both anode and cathode consists of sintered compacts of high purity tantalum powder. The dielectric layer of tantalum pentoxide electrolytically formed on each compact is completely stable. The system is enclosed between a tantalum plate and a tantalum cup, with an outer nickel case.

The seal is a highly efficient system comprising a PTFE gasket clamped between coined plates of tantalum by a work-hardened nickel ring. This type of seal, common to all button styles, is largely responsible for their long life and high reliability under severe military environments.

The combination of the tantalum pentoxide dielectric stability and the extremely efficient seal has been shown to ensure that there is no significant difference in electrical parameters or instant use behaviour after 10 years storage or longer. A shelf life in excess of 20 years is confidently expected.

There are four types of terminations and mounting options are available. These include a treated stud or bolt, PCB pins, a tab for panels, and ribbons leads slotted through-holes. These are illustrated in the photograph, and dimensional table drawing.

APPLICATIONS

The CH2 series is designed for use in general military and professional applications. For example: Power supply "smoothing", filter networks, switching, by-pass, timer functions, and where reverse potential occur.

WEIGHT

The CH2 style with a stud termination weighs approximately 18.1 g, including the nut. The CH2 styles, which has a printed circuit board mounting, weighs approximately 17.3 g.

FEATURES

- All-Tantalum electrodes eliminate silver migration
- Withstands high ripple current
- Long life reliability
- Reverse voltage capability
- Mounting: Through-hole

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 150 °C

Voltage Range: 3 V_{DC} to 75 V_{DC}

Capacitance Range: 33 µF to 470 µF

SPECIFICATIONS

Environmental classification: 55/150/56

Vibration: 10 Hz to 2000 Hz, 0.75 mm or 98 m/s², 150 h

Bump: 390 m/s², 4000 bumps

Shock: 981 m/s²

Acceleration: 981 m/s²

Low air pressure: 1 kPa

REVERSE VOLTAGE CAPABILITY

The CH2 series employ tantalum cathodes which allow the continuous application of reverse potentials not exceeding 3 V over the whole temperature range.

SURGE VOLTAGE

The surge voltage capability is 115 % of the voltage rating at the relevant temperature.

TEMPERATURE RANGE

The capacitor is designed for operation between - 55 °C and + 150 °C.

CAPACITANCE TOLERANCE

The standard capacitance tolerance is ± 20 % although special tolerances are available by arrangement.

RIPPLE CURRENT CAPABILITY

The maximum allowable ripple current is 750 mA_{RMS}. This value applies under normal cooling conditions and is irrespective of frequency or waveform. The algebraic sum of the AC peak and DC voltages must not exceed the forward or reverse voltage ratings at the relevant temperature.

APPLICATION INFORMATION

Capacitors may be operated at less than the rated voltage, resulting in significantly reduced leakage current values.

In timing circuits, or other applications where the device is subjected only to a DC voltage, the ballistic or DC capacitance will be somewhat larger than measured at 50 Hz.

The parametric information must necessarily be brief, although additional comprehensive data is available on request, and the tests tailored to customers' requirements can be made.

RELIABILITY

All capacitors are subjected to burn-in. This is to remove infant mortalities and ensure reliability. The capacitor lifetime is enhanced when the unit is subjected to a reduced ripple current, a low ambient temperature, and is externally cooled. The use of a heat sink is recommended.

Wet Tantalum Capacitor, Button, All-Tantalum Case, - 55 °C to + 125 °C Operation

INTRODUCTION

The design employs a non-solid electrolyte and a sintered tantalum anode.

The cathode is also of tantalum and overcomes the restriction of the silver cathode system in allowing a high ripple current rating and application of a 3 V reverse potential. This all-tantalum construction results in a non-catastrophic wear-out mechanism.

The seal is a high efficient system comprising a PTFE gasket clamped between coined plates of tantalum by a work-hardened nickel ring. This type of seal is common to all button styles it is largely responsible for their long life and high reliability and severe military environment.

APPLICATIONS

The CS2 series are designed as a direct replacement for the obsolete 'A' series, where there is no standard CA unit at the required capacitance, and voltage, or when the standard CA unit (8.5 mm) is not acceptable.

It should be noted that the upper category temperature of the CS2 unit is 125 °C for the 'A' unit.

WEIGHT

The approximate weights (in grams) for the CS2 capacitors is 14.5 g.

FEATURES

- All-Tantalum electrodes eliminate silver migration
- Withstands high ripple current
- Long life reliability
- Reverse voltage capability
- Replacement for "A" series range of silver cased buttons
- Mounting: Through-hole

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 125 °C

Voltage Range: 3 V_{DC} to 70 V_{DC}

Capacitance Range: 50 µF to 750 µF

SPECIFICATIONS

Environmental classification: 55/125/56

Vibration: 10 Hz to 2000 Hz, 0.75 mm or 98 m/s², 15 h

Bump: 390 m/s², 4000 bumps

Shock: 981 m/s²

Acceleration: 981 m/s²

Low air pressure: 1 kPa

REVERSE VOLTAGE CAPABILITY

The CS2 series employs tantalum cathodes which allow the continuous application of reverse potentials not exceeding 3 V over the whole temperature range.

SURGE VOLTAGE

The surge voltage capability is 115 % of the voltage rating at the relevant temperature.

TEMPERATURE RANGE

The capacitor is designed for operation between - 55 °C and + 125 °C, with linear voltage derating above + 85 °C to 66 % of the rated voltage at + 125 °C.

CAPACITANCE TOLERANCE

The standard capacitance tolerance is ± 20 % although special tolerances are available by arrangement.

APPLICATION INFORMATION

Capacitors may be operated at less than the rated voltage, resulting in significantly reduced leakage current values.

In timing circuits, or other applications where the device is subjected only to a DC voltage, the ballistic or DC capacitance will be somewhat larger than measured at 50 Hz.

The parametric information must necessarily be brief, although additional comprehensive data is available on request, and the tests tailored to customers' requirements can be made.

RELIABILITY

All capacitors are subjected to burn-in. This is to remove infant mortalities and ensure reliability. The capacitor lifetime is enhanced when the unit is subjected to a reduced ripple current, a low ambient temperature, and is externally cooled.

ORDERING PROCEDURE

Example: CS2C (220 μ F, 50 V_{DC})

Wet Tantalum Capacitors Surface Mount, Molded Case

RoHS*
COMPLIANT

FEATURES

- Terminations: standard tin/lead (SnPb), 100 % tin (RoHS compliant) terminations available
- Very high capacitance, 10 µF to 470 µF
6 V to 125 V, - 55 °C to + 125 °C
- Very low ESR
- High ripple current capability
- Low DCL
- Model M34 wet tantalum electrolytic chip capacitors incorporate the advantages of all the varieties of electrolytic capacitors and eliminate most of the disadvantages. These units have a transient reverse voltage capability and a higher ripple current capability than any other electrolytic type with similar combinations of capacitance and case size.
- Compliant to RoHS Directive 2002/95/EC

Note

* Pb containing terminations are not RoHS compliant, exemptions may apply

APPLICATION NOTES

- No continuous reverse voltage permissible.
- Transient reverse voltage surges are acceptable under the following conditions:
The peak reverse voltage does not exceed 1.5 V and the peak current times the duration of the reverse transient does not exceed 0.05 A. In addition, the repetition frequency of the reverse voltage surge is less than 10 Hz.
- The peak of the applied AC ripple and the applied DC voltage must not exceed the DC voltage rating of the capacitor.

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 85 °C
(to + 125 °C with voltage derating)

Capacitance Tolerance: At 120 Hz, + 25 °C, ± 20 % standard, ± 10 %

DC Leakage Current (DCL Max.): At + 25 °C and above: Leakage current shall not exceed the values listed in the Standard Ratings table.

Life Test: Capacitors are capable of withstanding a 2000 h life test at a temperature of + 85 °C or + 125 °C at the applicable rated DC working voltage.

Following life test:

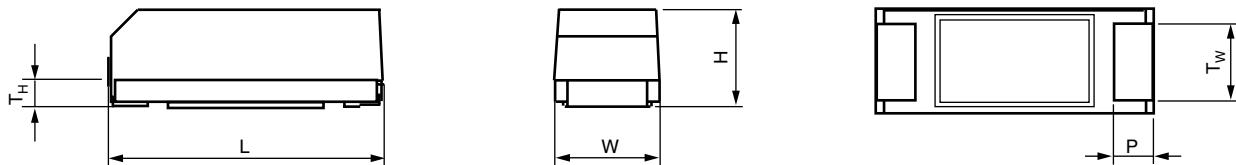

- DCL, measured at + 85 °C rated voltage, shall not be in excess of the original requirement.
- The equivalent series resistance shall not exceed 150 % of the initial requirement.
- Change in capacitance shall not exceed 10 % from the initial measurement.

MOUNTING

Due to the size and weight of these capacitors, we recommend that a supplemental mounting restraint to be used in printed circuit board attachment in addition to the reflowed solder.

One recommendation is to use an adhesive such as defined in the J-STD-001DS.

This is the Space Application Electronic Hardware Addendum to J-STD-001 (Requirements for Solder Electrical and Electronic Assemblies).

PERFORMANCE CHARACTERISTICS OF M34 CAPACITORS

ELECTRICAL CHARACTERISTICS	
ITEM	PERFORMANCE CHARACTERISTICS
Operating temperature range	- 55 °C to + 125 °C
Capacitor tolerance	± 20 %, ± 10 %, at 120 Hz
Capacitance change (maximum)	Limits per standard ratings table
ESR	Limits per standard ratings table
AC ripple current	Limits per standard ratings table
DCL (maximum leakage current)	Limits per standard ratings table
Impedance (maximum)	Limits per standard ratings table
Reverse voltage	Reverse voltage shall be in accordance with DSCC drawing 93026. There shall be no continuous reverse voltage. Transient reverse voltage surges are acceptable under the following conditions: a) Peak reverse voltage is equal to or less than 1.5 V and the product of the peak current times the duration of the reverse transient is 0.05 A or less. b) The repetition rate of the reverse voltage surges is less than 10 Hz.
Surge voltage	Surge voltage shall be in accordance with MIL-PRF-39006 and Table II of DSCC93026. The DC rated surge voltage is the maximum voltage to which the capacitors should be subjected under any conditions. This includes transients and ripple at the highest line voltage. The surge voltage is 115 % of rated DC working voltage.
Life test	The capacitors shall be capable of withstanding a 2000 h life test at 85 °C at rated voltage

ENVIRONMENTAL CHARACTERISTICS		
ITEM	CONDITION	COMMENTS
Hermeticity	MIL-PRF-39006	There shall be no evidence of leakage after testing to MIL-PRF-39006 specifications.
Moisture resistance	MIL-PRF-39006	Tested in accordance to MIL-PRF-39006 for 30 cycles.
Altitude	MIL-STD-202G, method 105 D	100 000 feet test

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 85 °C
(to + 125 °C with voltage derating)

Capacitance Tolerance: At 120 Hz, + 25 °C. ± 20 % standard. ± 10 %, ± 5 % available as special.

DC Leakage Current (DCL Max.): At + 25 °C and above:
Leakage current shall not exceed the values listed in the Standard Ratings Tables.

Life Test: Capacitors are capable of withstanding a 2000 h life test at a temperature of + 85 °C or + 125 °C at the applicable rated DC working voltage.

Following life test:

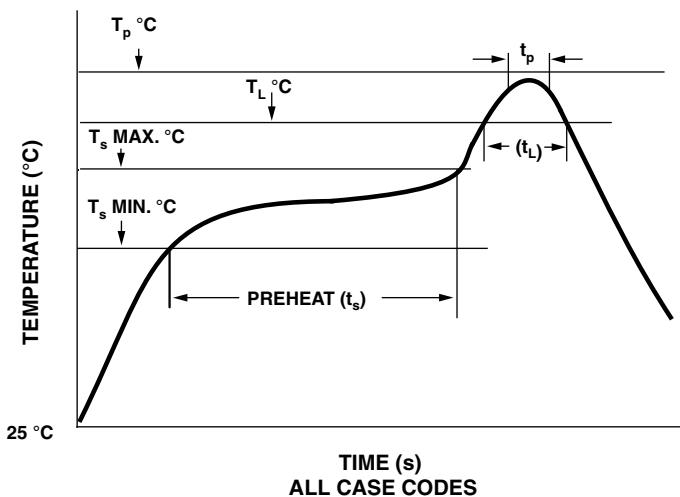

1. DCL, measured at + 85 °C rated voltage, shall not be in excess of the original requirement.
2. The equivalent series resistance shall not exceed 150 % of the initial requirement.
3. Change in capacitance shall not exceed 10 % from the initial measurement.

ORDERING INFORMATION									
M35	C	826	M	125	B	Z	S	L	
MODEL	CASE CODE	CAPACITANCE	CAPACITANCE TOLERANCE	DC VOLTAGE RATING AT + 85 °C	TERMINATION AND PACKAGING	RELIABILITY LEVEL	TEMP	ESR	
See Ratings and Case Codes table	This is expressed in picofarads. The first two digits are the significant figures. The third is the number of zeros to follow.	K = ± 10 % M = ± 20 %	This is expressed in volts. To complete the three-digit block, zeros precede the voltage rating. A decimal point is indicated by an "R" (6R3 = 6.3 V)	A = 100 % tin (RoHS compliant), bulk B = Std, tin/lead, bulk	Z = Non-ER S = Std S = Std. L = Low				

Note

- Packaging: The use of formed plastic tubes for packing bulk components is standard

MOUNTING

Due to the size and weight of these capacitors, we recommend that a supplemental mounting restraint to be used in printed circuit board attachment in addition to the reflowed solder.

One recommendation is to use an adhesive such as defined in the J-STD-001DS.

This is the Space Application Electronic Hardware Addendum to J-STD-001 (Requirements for Solder Electrical and Electronic Assemblies).

PERFORMANCE CHARACTERISTICS OF M35 CAPACITORS

ELECTRICAL CHARACTERISTICS	
ITEM	PERFORMANCE CHARACTERISTICS
Operating temperature range	- 55 °C to + 125 °C
Capacitor tolerance	± 20 %, ± 10 % at 120 Hz
Capacitance change (maximum)	Limits per Standard Ratings table. Measured per requirements of MIL-PRF-39006.
ESR	
AC ripple current	
DCL (maximum leakage current)	
Impedance (maximum)	
Reverse voltage	Reverse voltage shall be in accordance with MIL-PRF-39006/22. Units are capable of withstanding 3 V in reverse at + 85 °C for 125 h.
Surge voltage	Surge voltage shall be in accordance with MIL-PRF-39006. The DC rated surge voltage is the maximum voltage to which the capacitors should be subjected under any conditions. This includes transients and peak ripple at the highest line voltage. The surge voltage is 115 % of rated DC working voltage.
Life test	The capacitors shall be capable of withstanding a 2000 h life test at 85 °C at rated voltage.

ENVIRONMENTAL CHARACTERISTICS		
ITEM	CONDITION	COMMENTS
Hermeticity	MIL-PRF-39006	The internal component has been tested to be compliant to the hermeticity requirements of MIL-PRF-39006/22.
Moisture resistance	MIL-PRF-39006	The internal component has been tested to be compliant to the moisture resistance requirements of MIL-PRF-39006/22.
Altitude/barometric pressure (reduced)	MIL-PRF-39006	The internal component has been tested to be compliant to the altitude or reduced barometric pressure requirements of MIL-PRF-39006/22 (150 000 feet).

MECHANICAL CHARACTERISTICS		
ITEM	CONDITION	COMMENTS
Thermal shock	MIL-STD-202, Method 107, A	Per MIL-PRF-39006, 30 cycles
Shock	MIL-STD-202, Method 213	Per MIL-PRF-39006, 500 g
Vibration (high frequency)	MIL-STD-202, Method 204	Per MIL-PRF-39006, 80 g
Vibration (random)	MIL-STD-202, Method 214	Per MIL-PRF-39006, 53.79 g
Resistance to solder heat	MIL-STD-202, Method 210	The capacitor must withstand solder dipping of the terminals at 260 °C for 10 s. The capacitor must not be visibly damaged and the electrical characteristics must not be affected.
Solderability	ANSI J-STD-002	The terminations must be solderable per the requirements of MIL-PRF-55365 para. 4.10
Part markings	MIL-STD-1285	The part marking shall include Vishay name, trademark, capacitance, voltage, date code and lot symbol.
Weight (typical) in g	3.5

DSCC 93206 SuperTan® Wet Tantalum Capacitors

FEATURES

- Terminations: Standard tin/lead (Sn/Pb)
- Very high capacitance
- 10 μF to 1800 μF
- 25 V_{DC} to 125 V_{DC}
- - 55 °C to + 125 °C
- Very low ESR
- High ripple current
- All tantalum case
- Hermetically sealed
- Low DCL

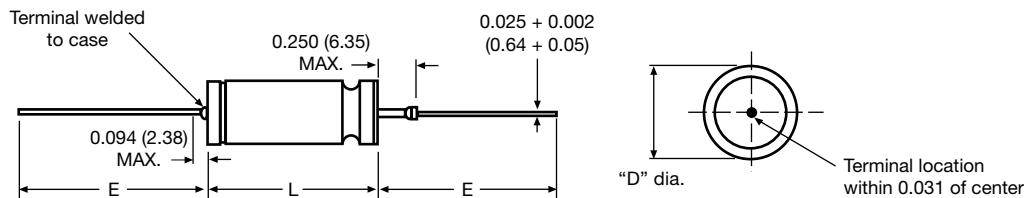

Vishay's DSCC 93026 capacitor represents a major breakthrough in wet tantalum technology. Its unique cathode system provides the highest capacitance per unit volume. The design facilitates a doubling of capacitance, lower ESR and higher ripple current rating compared with conventional wet tantalum products. Moreover, the DSCC 93026 has the capacitance stability of a solid tantalum capacitor and there are no circuit impedance restrictions.

The DSCC 93026 is housed in an all tantalum, hermetically sealed case and is manufactured to withstand hazardous environments. The DSCC 93026 is used widely in the defense and aerospace industries and whenever there is a space problem.

APPLICATION NOTES

- a) No continuous reverse voltage permissible.
- b) The peak of the applied AC ripple and the applied DC voltage must not exceed the DC voltage rating of the capacitor.
- c) Ripple current ratings by part number at 85 °C and 40 kHz are included in the table. Ripple current correction factors for other temperatures and frequencies are given on the next page.
- d) Transient reverse voltage surges are acceptable under the following conditions:
The peak reverse voltage does not exceed 1.5 V and the peak current times the duration of the reverse transient does not exceed 0.05 As. In addition, the repetition frequency of the reverse voltage surge is less than 10 Hz.

SuperTan® Extended (10004) Capacitors, Wet Tantalum Capacitors with Hermetic Seal

FEATURES

Vishay SuperTan® Extended (10004) represents a major breakthrough in wet tantalum capacitor technology. Its unique cathode system, also used in the ST, provides the highest capacitance per unit volume available. The 10004 combines the inherent reliability of wet tantalum with the capacitance stability of solid tantalum, and there are no circuit impedance restrictions. The range is exceptionally well suited for low voltage filtering and energy storage applications. Ideal for designs targeting the military and aerospace industry.

The SuperTan Extended (10004) is housed in an all tantalum, hermetically sealed case and is manufactured to withstand high stress and hazardous environments.

- Axial through-hole terminations: Standard tin/lead (Sn/Pb)

PERFORMANCE CHARACTERISTICS

Operating Temperature: - 55 °C to + 85 °C (to + 125 °C with voltage derating)

Capacitance Tolerance: At 120 Hz, + 25 °C. $\pm 20\%$ standard. $\pm 10\%$ available as special.

DC Leakage Current (DCL Max.): At + 25 °C and above: Leakage current shall not exceed the values listed in the Standard Ratings Tables.

Life Test: Capacitors are capable of withstanding a 2000 h life test at a temperature of + 85 °C at the applicable rated DC working voltage.

Wet Tantalum Capacitors, Tantalum-Case with Glass-to-Tantalum Hermetic Seal for - 55 °C to + 125 °C Operation

FEATURES

Vishay's DSCC 10011 capacitor represents a major breakthrough in wet tantalum technology for high-energy applications. The unique case design provides for the highest capacitance per unit volume. Vishay's DSCC 10011 capacitor also utilizes the proven hybrid technology of our SuperTan® product.

Vishay's DSCC 10011 capacitor is housed in an all tantalum, hermetically sealed case, and is manufactured to withstand high stress and hazardous environments. The Vishay design provides a unique double seal for improved reliability and performance.

Vishay's DSCC 10011 capacitor is of the same basic design and construction as the Vishay HE3 high energy capacitor series, datasheet 42089.

PERFORMANCE CHARACTERISTICS

Operating Temperature:

- 55 °C to + 85 °C (to + 125 °C with voltage derating)

Capacitance Tolerance:

At 120 Hz, + 25 °C ± 20 % standard

DC Leakage Current (DCL Max.):

At + 25 °C: Leakage current shall not exceed the values listed in the Standard Ratings tables.

Life Test:

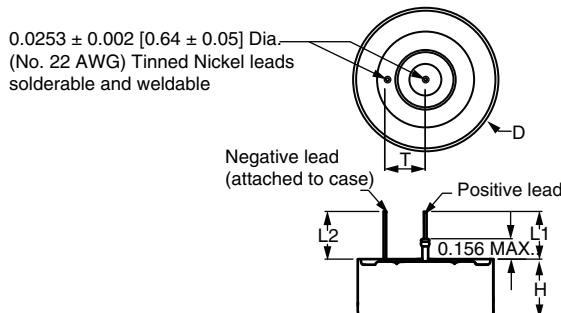

Capacitors are capable of withstanding a 1000 h life test at a temperature of + 85 °C at the applicable rated DC working voltage.

PERFORMANCE CHARACTERISTICS OF HIGH ENERGY CAPACITORS

ELECTRICAL PERFORMANCE CHARACTERISTICS	
ITEM	PERFORMANCE CHARACTERISTICS
Operating temperature range	- 55 °C to + 85 °C (to + 125 °C with voltage derating)
Capacitor tolerance	± 20 % at 120 Hz
ESR	Limits per Standard Ratings table
DC leakage current (DCL max.)	At 25 °C the leakage current shall not exceed values listed in the Standard Rating table.
Reverse voltage	No continuous reverse voltage permitted
Surge voltage	The test shall be at 1000 cycles at 110 % of rated voltage at 85 °C. A cycle consists of a 30 s charge and a 330 s discharge through 100 W resistor.
Life test at + 85 °C	1000 h at + 85 °C

ENVIRONMENTAL PERFORMANCE CHARACTERISTICS		
ITEM	TEST AND CONDITIONS	COMMENTS
Hermeticity	MIL-STD-202, method 112 C/IIIa	The capacitor shall be hermetically sealed such that the case does not leak electrolyte or vent any gas when exposed to a vacuum.
Moisture resistance	MIL-STD-202, method 106	6 V polarity
Altitude	MIL-STD-202, method 105 C, test condition D	100 000 feet test

MECHANICAL PERFORMANCE CHARACTERISTICS		
ITEM	TEST AND CONDITIONS	COMMENTS
Thermal shock	MIL-STD-202, method 107 G	Test condition A
Shock	MIL-STD-202, method 213 B test condition G	11 ms, 50 g
Vibration - high frequency	MIL-STD-202, method 204 D test condition D	12 sweeps/axis, 20 g peak
Vibration - random	MIL-STD-202, method 214 A test condition I, D	1.5 h/axis, 12 g
Resistance to solder heat	MIL-STD-202, method 210 F	The capacitor must withstand solder dipping of the terminals at 260 °C for 10 s. The capacitor must not be visibly damaged and the electrical characteristics must not be affected.
Solderability	MIL-STD-202, method 208	
Terminal strength	MIL-STD-202, method 211 A	The capacitor terminals must withstand a 5 pound pull test for 5 s to 10 s. The capacitor must not be visibly damaged and the electrical characteristics must not be affected.
Resistance to solvents	MIL-STD-202, method 215 J	The capacitor shall be permanently and legibly marked on the circumference of the case. The markings shall be resistant to solvents.
Weight (mass)		See dimensions table

DSCC 10011 MOUNTING OPTIONS

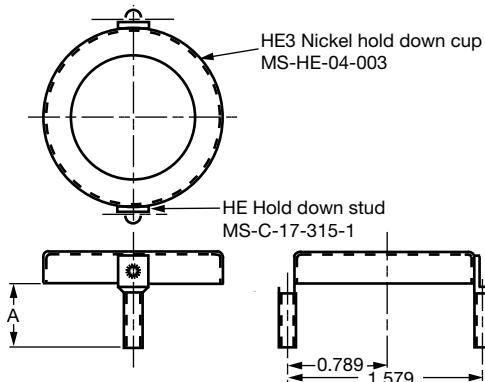

The DSCC 10011 capacitor can be mounted with many commercially available methods. Vishay offers the optional mounting hardware outlined below.

THROUGH-HOLE

If mounted through-hole, the glass-to-metal seal must be protected from potential mounting and application stress. The HE3 can be mounted termination down through the HE3 SPC001 spacer into the PCB. The proper size bracket HE3BKT00* can then be utilized to hold the DSCC 10011 rigidly to the PCB.

TERMINATIONS UP

If mounted with terminations facing up for attachment to wiring, the spacer is not needed. The DSCC 10011 can be reverse with terminations facing upward through the center of the HE3BKT00* bracket, which is then mounted through the PCB.

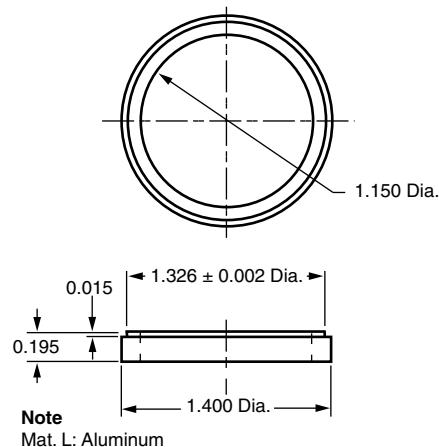

Notes

- Spot weld, 2 places
- Mounting bolt:
 1. Material - Stainless steel
 2. Thread - 6-32 NC-2A

PART NUMBER ⁽¹⁾	STUD	A ± 0.010
HE3BKT001	HE3A	0.391
HE3BKT002	HE3B	0.518

HE3BKT004	HE3A W/spacer	0.572
HE3BKT005	HE3B W/spacer	0.699
HE3BKT006	HE3C W/spacer	0.831

Note

⁽¹⁾ The part numbers shown are for ordering the mounting bracket and/or spacer. The DSCC 10011 capacitor must be ordered separately using the correct part number as outlined in Ordering Information and in the Standard Ratings table.

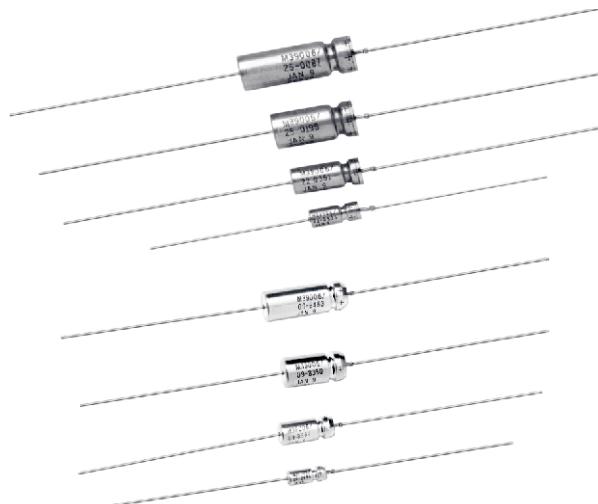

**PART NUMBER⁽¹⁾**

HE3SPC001

Note

⁽¹⁾ The part numbers shown are for ordering the mounting bracket and/or spacer. The HE3 capacitor must be ordered separately using the correct part number as outlined in Ordering Information and in the Standard Ratings table.

Wet Tantalum Capacitors, Space Level, Established Reliability, DSCC Drawings 06013, 06014, 06015, 06016

FEATURES

- Screened for space level applications
- Tantalum case, hermetically sealed, axial leaded
- Screened M39006/22/25/30/31 capacitors
 - “R” or 0.001 %/1000 failure rate
 - “H” or high shock and vibration rated
 - Enhanced 100 % or group A testing
 - Enhanced production lot testing - Group b prior to shipment
- Stability
- Thermal shock
- 1000 h life at + 85 °C

Notes

(1) Dash number will include the letter "H" to indicate the vibration and shock requirements (i.e., 51 g random vibration, 80 g sinusoidal vibration and 500 g shock).

(2) For ripple current limits at various temperatures, voltages, and frequencies, see "Ripple Current" table.

(3) Maximum ESR is calculated by the following equation:

$$\text{ESR (max.)} = \frac{\text{DF}}{2\pi f C}, \text{ where}$$

DF = Maximum dissipation factor from "Standard Ratings" table

f = 120 Hz

C = Nominal capacitance

Notes

(1) Dash number will include the letter "H" to indicate the vibration and shock requirements (i.e., 51 g random vibration, 80 g sinusoidal vibration and 500 g shock).

(2) For ripple current limits at various temperatures, voltages, and frequencies, see "Ripple Current" table.

(3) Maximum ESR is calculated by the following equation:

$$\text{ESR (max.)} = \frac{\text{DF}}{2\pi f C}, \text{ where}$$

DF = Maximum dissipation factor from "Standard Ratings" table

f = 120 Hz

C = Nominal capacitance

Notes

- (1) Dash number will include the letter "H" to indicate the vibration and shock requirements (i.e., 51 g random vibration, 80 g sinusoidal vibration and 500 g shock).
- (2) For ripple current limits at various temperatures, voltages, and frequencies, see "Ripple Current" table.
- (3) Maximum ESR is calculated by the following equation:

$$\text{ESR (max.)} = \frac{\text{DF}}{2\pi f C}, \text{ where}$$

DF = Maximum dissipation factor from "Standard Ratings" table

f = 120 Hz

C = Nominal capacitance

Notes

- (1) Dash number will include the letter "H" to indicate the vibration and shock requirements (i.e., 51 g random vibration, 80 g sinusoidal vibration and 500 g shock).
- (2) For ripple current limits at various temperatures, voltages, and frequencies, see "Ripple Current" table.
- (3) Maximum ESR is calculated by the following equation:

$$\text{ESR (max.)} = \frac{\text{DF}}{2\pi f C}, \text{ where}$$

DF = Maximum dissipation factor from "Standard Ratings" table

f = 120 Hz

C = Nominal capacitance

- At + 125 °C the rated voltage of the capacitors decreases to 66 2/3 percent of the + 85 °C rated voltage.
- The peak of the applied AC ripple voltage plus the applied DC voltage must not exceed the DC voltage rating of the capacitor either forward or reverse.
- The ripple current listed represents a rating calculated using a maximum internal temperature rise (ΔT) of + 50 °C at 40 kHz at + 85 °C ambient with a maximum peak rated voltage of 66 2/3 percent of the + 85 °C peak voltage rating.
- The maximum allowable internal temperature rise (ΔT) decreases linearly to a calculated + 10 °C rise at + 125 °C ambient.
- The internal temperature rise is directly proportional to the equivalent series resistance of the capacitor and equivalent series resistance increases with decreasing frequency.

Custom Design, Component Assemblies TANTAPAK®

Vishay offers expert design service and applications assistance to produce custom design capacitor banks and a virtually unlimited variety of component assemblies. Custom TANTAPAK® assemblies can be designed to take advantage of the superior performance, stability and reliability of Vishay Sprague tantalum capacitors, assembled in unique packages and in configurations that will perform in extraordinary environmental conditions.

The Vishay family of tantalum capacitors, solids and wet slug can be electrically and physically configured for your application. In addition, any of a wide variety of electronic components can be incorporated in TANTAPAK® modules. There are few limitations to the geometries or circuit functions available with TANTAPAK® assemblies. Terminal size, pin configurations, package dimensions, mounting

hardware, case markings and other special requirements are optional with these made-to-order units. TANTAPAK® assemblies can be designed to fit your specific requirements.

Vishay's skill in helping designers develop component assemblies is backed up by more than 25 years of experience in the production of TANTAPAK® modules.

TANTAPAK® assemblies now in service can withstand severe environmental conditions of high humidity, high altitude, severe shock and vibration. TANTAPAK® modules are rated for operation over the temperature range of - 55 °C to + 125 °C and with special design to + 200 °C.

Inquiries should be directed to the factory.
